*DX 599700 LOCHGILPHEAD*

4 March 2013

**NOTICE OF MEETING**

A meeting of the **SHORT LIFE WORKING GROUP - ROADS ASSET MANAGEMENT AND MAINTENANCE STRATEGY** will be held in the **COUNCIL CHAMBER, KILMORY, LOCHGILPHEAD** on **MONDAY, 11 MARCH 2013** at **11:00 AM**, which you are requested to attend.

**BUSINESS**

- 1. APOLOGIES FOR ABSENCE**
- 2. DECLARATIONS OF INTEREST (IF ANY)**
- 3. MINUTES**  
Short Life Working Group – Roads Asset Management and Maintenance Strategy held on 28 January 2013 (Pages 1 - 4)
- 4. ALTERNATIVE OPTIONS FOR THE ALLOCATION OF CAPITAL FUNDING**  
Live demonstration/workshop with WDM to see prioritisation of schemes based on the three options being considered by the Short Life Working Group
- 5. ROADS ASSET MANAGEMENT PLAN AND ROADS HIERARCHY**  
Consideration to be given regarding changes to the hierarchy and response time – existing Plan attached (Pages 5 - 84)
- 6. ROADS MAINTENANCE PLAN**  
Report by Head of Roads and Amenity Services (Pages 85 - 104)
- 7. ROADS ASSET LIFE CYCLE PLANNING**  
Live demonstration of work in progress

**SHORT LIFE WORKING GROUP – ROADS ASSET MANAGEMENT AND MAINTENANCE STRATEGY**

Councillor Mary-Jean Devon                      Councillor Duncan MacIntyre  
Councillor Robert Graham MacIntyre      Councillor Ellen Morton  
Councillor John Semple

Contact: Hazel MacInnes    Tel: 01546 604269

**MINUTES of MEETING of SHORT LIFE WORKING GROUP - ROADS ASSET MANAGEMENT AND MAINTENANCE STRATEGY held in the COMMITTEE ROOM 1, KILMORY, LOCHGILPHEAD on MONDAY, 28 JANUARY 2013**

**Present:** Councillor John Semple (Chair)

Councillor Duncan MacIntyre                      Councillor Ellen Morton  
Councillor Robert G MacIntyre

**Attending:** Jim Smith, Head of Roads and Amenity Services  
Bruce West, Head of Strategic Finance  
Neil Brown, Roads and Amenity Services Manager  
Graham Brown, Roads and Amenity Services Manager  
Patricia O'Neill, Central Governance Manager  
Jamie McLafferty, Technical Assistant

**1. APOLOGIES FOR ABSENCE**

There were no apologies for absence intimated .

**2. DECLARATIONS OF INTEREST**

There were no declarations of interest intimated.

**3. MINUTES**

The Short Life Working Group approved the Minutes of the Meeting of 18 December 2012 as a correct record.

**4. PRESENTATION FROM HEAD OF STRATEGIC FINANCE**

The Group heard from the Head of Strategic Finance who provided an explanation of Local Government Revenue Funding, Roads Maintenance GAE and Local Government Capital Funding. The Group had a discussion on Capital and Revenue funding based on the tabled slides and it was noted that Argyll and Bute were disadvantaged in terms of allocation as roads funding was based on where a car is registered and this was more likely to be in a city than in the country.

**Decision**

The Group were satisfied that they had been updated on the Capital and Revenue Funding.

(Ref: Presentation slides by the Head of Strategic Finance, tabled)

**5. ROADS ASSET MANAGEMENT PLAN**

Graham Brown, Roads and Amenity Manager provided an update on the Roads Asset Management Plan (RAMP) together with Road Maintenance Plan for the

Road Network on the position for this year and next year. He ran through the activities plan which now contained more detail on the actual budget, targeted quantity and achieved targets in percentages on an area basis. Jim Smith, Head of Roads and Amenity Services advised that the documents were a work in progress and would be submitted to the March Area Business Days. The Chair advised that the plan would have risk elements factored in and the focus is what we can do as well as the budget.

### **Decision**

1. The Group noted the Roads Asset Management Plan (RAMP) and the Road Maintenance Plan for the Road Network and agreed that decisions on the allocation and prioritisation would be made at a future meeting.
2. Agreed that both documents be discussed at the next Meeting of the SLWG.

(Ref: Roads Asset Management Plan and the Road Maintenance Plan for the Road Network, tabled)

## **6. INCLUDING FOOTWAYS AND FOOTPATHS IN THE CAPITAL PROGRAMME**

Jamie McLafferty, Technical Assistant provided an update on the footways and footpaths in the Capital Programme which was now on the WDM system as inventory items which shows the location, length, survey date etc. The system indicated where work was being done on a local level area level.

It was noted that footpaths were included in the allocation for roads but the allocation was worked out on road condition.

### **Decision**

The Group noted how the data was held for the footways and footpaths.

(Ref: Demonstration on the WDM system.)

## **7. EXISTING ROAD HIERARCHY**

Jim Smith, Head of Roads and Amenity Services advised of the Road Hierarchy which will assist Members in looking at risk with the roads being marked 1-3, this will be reviewed over the next two years but the documents had been circulated today to make Members aware of its existence.

It was noted that the Hierarchy classification was a key management tool for the deployment of resources and the intention was to have this in place by November 2013.

### **Decision**

The Group noted the Road Hierarchy as a working document which will be updated on an ongoing basis. An update report will be presented to the next meeting which will include a view on the likelihood of bringing forward the hierarchy classification before November 2013.

(Ref: Roads Hierarchy document, submitted)

**8. CONSIDERATION OF ALTERNATIVE OPTIONS FOR THE ALLOCATION OF CAPITAL FUNDING: DEMONSTRATION USING WDM TO LOOK AT ANY CHANGES BETWEEN:**

The Group had previously discussed this item during the Meeting and it was noted that this would be the first item on the Agenda for the next Meeting.

**9. DATE OF THE NEXT MEETING**

It was agreed that the next Meeting of the Short Life Working Group take place on Monday 11 March 2013 at 11.00am in Kilmory, Lochgilphead.

&  
Asset Management  
Plan  
for the Road Network

**ROADS MAINTENANCE & ASSET MANAGEMENT PLAN**

**INDEX**

**SECTION 1: INTRODUCTION**

- 1.1 Purpose of the Plan
- 1.2 Definitions

**SECTION 2: GENERAL**

- 2.1 The Importance of Road Maintenance
- 2.2 Road Maintenance Strategy
- 2.3 Sustainable Road Maintenance
- 2.4 Objectives of the Plan
- 2.5 Managing Complaints
- 2.6 Legal Framework
- 2.7 Health & Safety
- 2.8 Management of Risk

**SECTION 3: MAIN ELEMENTS OF THE PLAN**

- 3.1 Network Hierarchy
- 3.2 Network Inventory
- 3.3 Category of Maintenance
- 3.4 Training and Development
- 3.5 Inspection Regime
- 3.6 Safety Inspections
- 3.7 Recording of Defects
- 3.8 Service Inspections
- 3.9 Methodology of Inspections
- 3.10 Condition Standards

**SECTION 4: MATERIALS AND TREATMENTS**

**SECTION 5: PROCESSES**

- 5.1 Quality Management and Sector Schemes

**SECTION 6: DEPOTS AND MATERIALS STORAGE**

**SECTION 7: STREET LIGHTING**

**SECTION 8: MEASURING PERFORMANCE**

- 8.1 Continuous Improvement
- 8.2 Method of Measuring
- 8.3 Performance Indicators
- 8.4 Benchmarking

**SECTION 9: PROGRAMMING AND PRIORITIES**

**SECTION 10: WINTER AND OTHER EMERGENCIES**

- 10.1 Introduction
- 10.2 Winter Service Operational Plan
- 10.3 Weather Forecasting and Detection Systems
- 10.4 Services
- 10.5 Weather and Other Emergencies

**SECTION 11: ANNUAL BUDGET PROCESS**

- 11.1 Annual Process
- 11.2 Overview Process Map

**APPENDIX 1 ROAD HIERARCHY**

**APPENDIX 2 GUIDE TO TRAINING LEVELS**

**APPENDIX 3 DEFECT INTERVENTION LEVELS**

**APPENDIX 4 CONDITION STANDARDS**

**APPENDIX 5 FINANCIAL BREAKDOWN (SEPARATE DOCUMENT)**

- A Average Revenue Spend 2001-2004
- B Rates for each Maintenance Activity
- C Calculation of Rates for each Maintenance Activity
- D Totals for each Activity

# ROADS MAINTENANCE & ASSET MANAGEMENT PLAN

## 1 INTRODUCTION

### 1.1 PURPOSE OF THE PLAN

1.1.1 The main purpose of road maintenance is to ensure that the road network is available for the safe and convenient movement of people and goods. This purpose however needs to be set within the wider contexts of integrated transport, Best Value and the corporate vision of the Council.

1.1.2 The purpose of this plan is to design a sustainable maintenance regime capable of managing the road network asset within the available resources and ensuring that the asset will be available for future generations.

1.1.3 What the Plan does :-

The plan will set condition standards for the various elements of the road network and optimum timescales for the various activities that are undertaken to maintain the condition of the road network. This is achieved by :-

1. Collecting Inventory

By collecting and quantifying the relevant inventory along each length of road (width, length, number of gullies etc., lengths of ditches, walls, footways) the workload required to maintain the road network to the relevant standard can be established and costed.

2. Establishing the Hierarchy of the Roads

The hierarchy or importance of each road link will be used to decide the standard of maintenance to be applied, the regulatory of inspections and the prioritising of the repairs to be undertaken.

3. Setting Standards for the Condition of the Network to be Maintained at

The maintenance plan sets the standards that the road will be maintained at taking into account the relevant factors such as importance of the route, traffic volumes, population served and the available overall budget.

4. Inspecting

Frequency of inspections to identify faults will be set for each route.

5. Prioritising Repairs

The urgency of repairs required will be set and available resources allocated to repairing the most important faults as a priority.

### 6. Matching workload to available budget

If funds are inadequate the standards of maintenance will be adjusted to balance the workload to match the available budget.

### 7. Programming Work

The overall workload having been identified will allow the most efficient programme of works to be set for completion during the financial year.

Each year this process will be reviewed and repeated to match the new budget and any increase in costs.

## 1.2 DEFINITIONS

### **Benchmark**

A parameter of data, process or function used for comparison.

### **Carriageway**

The part of the road laid out for use by motor vehicles.

### **Cycleway**

Collective term for all segregated facilities laid out for use of cycles.

### **Footway**

Collective term for all segregated facilities laid out for use of pedestrians.

### **List of Public Roads**

Register of public roads maintained by authorities.

### **Performance Indicator**

The measure of performance in exercising a function.

### **Performance Standard**

The minimum acceptable levels of performance in the exercise of a function and measured by reference to a performance indicator for that function.

### **Performance Target**

The level of performance in the exercise of a function that is expected to be achieved over a minimum period of a year and measured by reference to a performance indicator for that function.

### **Pavement**

Collective term for the construction of all running surfaces.

### **Road**

Any way over which there is a public right of passage and includes the road's verge, and any bridge over which, or tunnel through which the road passes.

### **Safety Inspection**

Inspection to identify all defects likely to create danger or serious inconvenience to users.

**Service Inspection**

Inspection to identify all defects likely to compromise serviceability.

**Sustainability**

To ensure that financial and operational resources are provided to avoid progressive deterioration of the asset.

## **2 GENERAL**

### **2.1 THE IMPORTANCE OF ROAD MAINTENANCE**

2.1.1 The importance of road maintenance and its relevance to the integrated transport agenda has never been more widely recognised. The inevitable consequences of significant under-investment over many years are increasingly visible and the subject of considerable public concern. Acceptable standards of safety and serviceability have been difficult to maintain and, perhaps more importantly, the ability of the network to effectively fulfil its wider community potential has been severely compromised.

2.1.2 The response of most authorities, including Argyll and Bute, to funding constraints has been to focus on limited short term repairs to the surface of carriageways and footways in order to address their legal responsibilities for safety and mitigate the financial consequences of claims. Necessary works of resurfacing and reconstruction have been deferred as long as possible, well beyond the optimum point for treatment, with the result that progressive deterioration has continued and eventual costs of repairs increased. In these circumstances, of course, it has been difficult to address many other areas of public concern as required by Best Value.

### **2.2 ROAD MAINTENANCE STRATEGY**

2.2.1 The strategy of the Road Maintenance and Asset Management Plan is to achieve a regime that ensures :-

#### **Road Network Safety**

- Complying with statutory obligations
- Meeting users needs

#### **Road Network Serviceability**

- Ensuring availability
- Achieving integrity
- Maintain reliability
- Enhancing quality

#### **Road Network Sustainability**

- Minimising cost over time
- Maximising value to the community
- Maximising environmental contribution

### **2.3 SUSTAINABLE ROAD MAINTENANCE**

2.3.1 A significant area of change is in the need for road maintenance to meet the challenge of sustainability. This requires that the wider economic, social and environmental implications of both the service and individual schemes are understood and then modified so far as practicable to ensure Best Value outcomes for the community.

## **2.4 OBJECTIVES OF THE PLAN**

- 2.4.1 To develop a policy for road maintenance, consistent with the wider principles of integrated transport, sustainability and Best Value .
- 2.4.2 To focus on the needs of users and the community, and their active involvement in the development and review of policies, priorities and programmes.
- 2.4.3 To adopt an efficient and consistent approach to asset management, with the collection, processing and recording of road inventory and road condition information, for the purpose of both local and national needs assessment, management and performance monitoring.
- 2.4.4 To adopt a risk management approach in determining local technical and operational standards.

## **2.5 MANAGING COMPLAINTS**

- 2.5.1 All complaints received from whatever source will be logged onto a database. This will be managed on an area by area basis but allowing council wide interrogation of the data. All complaints will be prioritised, with safety defects being classified at the highest level. All other complaints will be assessed by technical staff and acted upon in the most appropriate manner. Where possible feedback will be given to the complainants on the progress of their complaints.

## **2.6 LEGAL FRAMEWORK**

- 2.6.1 In addition to a general duty of care, there are a number of specific pieces of legislation, which provide the basis for powers and duties relating to Road Maintenance. The main legislation is contained in the Roads (Scotland) Act 1984, Section 1, which imposes a duty on local roads authorities, to maintain all public roads, to keep a list of "public roads" and to maintain and manage the list. Section 34 of the Act specifically imposes a duty on the authority to "take steps as they consider reasonable to prevent snow and ice endangering the safe passage of pedestrians and vehicles over public roads".
- 2.6.2 The New Roads and Streetworks Act 1991, is an enabling Act setting out the duties of Authorities to co-ordinate and regulate works carried out in the road for provision and maintenance of utility services by an organisation, and gives effect to a series of Regulations and Codes of Practice.
- 2.6.3 The Scottish Executive are presently consulting Local Authorities as to further powers being granted to reinforce the supervision of the work and the utilities.
- Specification for the reinstatement of openings in the road
  - Measures necessary when apparatus is affected by major works (Diversionary Works)
  - Safety at road works and street works
  - Co-ordination of Streetworks
  - Inspections
  - Record Keeping

## **2.7 HEALTH AND SAFETY**

- 2.7.1 The Health and Safety at Work Act 1974, together with the Management of Health and Safety at Work Regulations 1992 and Construction (Design and Management) Regulations 1994 make it a requirement that road authorities carry out work in a safe manner and establish arrangements for the management of construction works.
- 2.7.2 There are also a wide range of regulations and Codes of Practice which relate to the assessment, prevention and management of health and safety risks on site and the reporting of injuries and other incidents. Risk assessments of all aspects of the work have been carried out and these are reviewed regularly. From these risk assessments a book of "Safe Working Methods at Roadwork's " has been produced and is the basis of safe working on all road maintenance works.
- 2.7.3 All those involved in the planning, management, and delivery of the road maintenance service will receive training and regular updating as necessary on the health and safety requirements of the service.

## **2.8 MANAGEMENT OF RISK**

- 2.8.1 The management of road maintenance, including the establishment of regimes for inspection, setting standards for condition, determining priorities and programmes, will be taken against a clear comprehensive understanding and assessment of the risks and consequences involved.
- 2.8.2 The most commonly recognised risks affecting the service, relate to the safety of the network and accidents, injury or health risks relating to users and employees. Other risks relating to the other key objectives of road maintenance, serviceability and sustainability that have also been included in the assessment, are detailed below :-
- (a) Network loss or serious failure
  - (b) Operational
  - (c) Environmental
  - (d) Financial
  - (e) Contractual

## **3 MAIN ELEMENTS OF THE PLAN**

The development and delivery of a road maintenance and asset management plan has been based upon the following elements :-

### **3.1 NETWORK HIERARCHY**

- 3.1.1 In order to prioritise the allocation of available funds it is necessary to establish the hierarchy of roads within the network.
- 3.1.2 Hierarchies for all elements of the road network, footways and cycleways are defined in Tables 1-3. They have been determined to reflect the needs, priorities and actual use of each road in the network. The hierarchies have been applied to take account of local circumstances, for example the influence of schools and hospitals etc.

## ROAD HIERARCHY

TABLE 1

Rank	Hierarchy Description	Type of Road	Detailed Description
1	Strategic Road	Linking large main centres of population. Linking large main centres of population to Trunk road network.	Routes for fast moving long distance traffic with little frontage access or pedestrian traffic. Generally speed limits are in excess of 40mph and there are a few junctions. Normally two lane with no footway.
2	Main Distributor	Lifeline Routes connecting secondary centres of population to main population centres and Trunk road network.	These routes provide lifeline access from small villages to services within main population areas. They are of varying widths and not always capable of taking two way traffic.
2a	Urban Distributor	Main routes within built up areas. Bus routes and routes to hospitals. Routes linking urban routes to Strategic roads.	Routes between Strategic Roads and urban areas. Main routes within urban areas linking to commercial areas of towns and larger villages. Routes to Hospitals, Main Schools and other strategic buildings. On street parking is generally unrestricted and speed limit is 30mph with random pedestrian movement. Normally two lane with adjacent footways.
3	Minor Roads	Routes serving small settlements and individual access.	Lightly used lifeline routes serving small isolated communities, individual access to property and land. Predominately narrow single carriageway.
3a	Minor Urban Roads	Minor roads within urban areas	Residential loop roads or culs-de-sac. With or without footways and within 30 mph restriction. Spur roads to commercial areas

## FOOTWAY HIERARCHY

TABLE 2

Rank	Hierarchy Description	Type of Footway	Detailed Description
1	<b>Strategic Footways</b>	Main footways and pedestrianised areas within urban areas	Medium to high usage routes through Urban shopping areas. Routes to main schools, routes to hospitals and access to main transport links. A mixture of blacktop surfacing and paving slabs or blocks.
2	<b>Secondary Footways</b>	All other footways including Link footpaths	Linking local access footways through urban areas and busy rural footways. Footways with low usage, culs de sacs, and minor housing streets.

## CYCLEWAY HIERARCHY

TABLE 3

Rank	Description
A	Cycle-lane forming part of the carriageway, commonly 1.5m strip adjacent to nearside kerb.
B	Cycle track, a route for cyclists not contiguous with the public footway or carriageway. Shared cycle / footway either segregated by a white line or other physical segregation

3.1.3 Any changes in the criteria affecting any road link will require a reassessment of its category.

3.1.4 The categories of each road link shall be confirmed on a biennial basis .

3.1.5 The list of road links and their categories is contained in Appendix 1.

### 3.2 NETWORK INVENTORY

3.2.1 The detailed inventory will allow a maintenance regime to be established. The basis for this inventory will be the List of Roads. All assets within the network shall be recorded and referenced to the List of Roads. The level of detail that will be used is shown below. This inventory will be the basis of quantifying and establishing the annual maintenance programme to be carried out within the constraints of each years budget. Any shortfall in available budget compared to desirable works programme will be reported to Area Committees in the first instance.

**INVENTORY INFORMATION**

Carriageway	Road length and width
Footway	Footway length, width by side.
Footway Precincts	By Area
Gullies	Number
Street Lighting Columns	Number Single Head, Number Double Head
Illuminated Signs and Bollards	Number
Road Signs	Number
Lines and Markings	Length Centre, Edge lines , Junctions, other Markings
Grass Verges	By Length, width and side
Amenity Cuts	By Area
Main Sight lines	By Area and location
Boundary Fences and walls belonging to Authority	By Type and Length
Safety Fences	By Type and Length
Drainage Ditches	By Length and side
Pipe Drainage	By Length and Dia.
French Drains	By Length and Dia.
Manholes and Silt Traps	Number
Safety Kerb/Beany Block etc/ kerbs not part of footway	By Length
Culverts	By Diameter, Length and Construction

### 3.3 CATEGORY OF MAINTENANCE

3.3.1 Maintenance will be split into various types of activities as shown below, each contributing in varying degrees to the maintenance objectives of safety, serviceability and sustainability. In each case the standards and delivery arrangements have been established with regards to these objectives and have been based on desired outcomes.

#### 3.3.2 Reactive

Responding to inspections, complaints or emergencies.

Priority	Description
1st	Sign and make safe
2nd	Make initial temporary repair
3rd	Provide permanent repair (note 2 <sup>nd</sup> step may be missed and repair made permanent first time)

#### 3.3.3 Routine

Regular consistent schedule, for drainage works, patching and verge maintenance.

Activity	Description
Drainage	Cleaning ditches, clearing offlets, Gully cleaning, Culvert grills, jetting of french drains safety kerb etc. and cleaning silt traps
Carriageway	Patching, slurry seal and edge repairs, Jet Patcher
Footway / Cycleways	Patching, slurry sealing and kerb repairs.
Verge Maintenance	Grass cutting, scrub cutting and verge repairs
Fences and barriers	Painting , inspection and repair
Traffic signs & signals	Repair, clean & replace
Road Marking and Studs	Refresh and replace
St Lighting	Repair and maintain
Bridges	Minor works and repairs

#### 3.3.4 Programmed

Planned schemes primarily surface dressing, resurfacing and new drainage works.

Activity	Description
Carriageways	Minor works:- Reconstruction, Resurfacing, Surface dressing, Edge Strengthening
Footway	Minor works:- Reconstruction, Resurfacing, Slurry sealing and kerbing
Drainage	Culvert replacement, New Ditches / Cut off Ditches / French drain
Bridges / Structures	Major bridge repairs, walls, embankment repair
Lighting	Column and cable replacement

### 3.3.5 Regulatory

Inspection and regulating the activities of others e.g. NRSWA.

Legislation	Activity Description
Road (Scotland) Act 1984	Keeping list of Roads up to Date. Maintaining all public roads.
New Roads and Streetworks Act	Enforcement of New Roads and Street Works Act including inspections of utilities reinstatements. Maintaining local Street Gazetteer. The co-ordination of works within the road.
Road (Scotland) Act 1984	Road Opening Permits, Road closures Skip Permits, Scaffolding Permits, Illegal Signs etc
Flood Prevention and Land Drainage (Scotland) Act 1997	Duties given to the Council under this Act are not covered in this plan
Road Traffic Act 1984	Temporary Traffic orders

### 3.3.6 Winter

Winter Maintenance

Activity	Description
Pre- Treatment	Preventative Salting
Treatment	Suitable Treatment for prevailing conditions.
Snow	Clearing of snow from carriageway.

### 3.3.7 Emergencies

Weather and other emergencies.

Activity	Description
Major	Landslides etc.
Flooding	Clearing of floods, signing to make safe.
High Winds	Clearing of Fallen Trees.
High Temperatures	Melting Bitumen (Surface Dressing) etc
Others	Road Crashes, Oil spillages, debris etc.

## 3.4 TRAINING AND DEVELOPMENT

- 3.4.1 All personnel involved in road maintenance will be trained in order to demonstrate levels of competence commensurate with their responsibilities. This shall be achieved and maintained by a combination of in-house and where appropriate external training e.g. certification for plant operators. Levels of training shall be reviewed annually and updated as required. See Appendix 2 for a general guide to staff training levels.

### 3.5 INSPECTION REGIME

3.5.1 An effective regime of inspection, assessment and recording is a crucial part of road maintenance. It will provide the basic information for addressing the key objectives of this road maintenance plan.

3.5.2 Inspections will be carried out using two different methods. These are :-

(1) Safety Inspections

(2) Service Inspections

Both methods are described in more detail below.

### 3.6 SAFETY INSPECTIONS

3.6.1 These are designed to identify all defects likely to create a danger to the network users.

3.6.2 The frequency with which these inspection are undertaken on any part of the network is determined by its position within the hierarchy shown in Table 1. A list of frequency of safety inspections is set out in Table 4 below.

**TABLE 4**

Feature	Rank	Hierarchy Description	Frequency	Method
Roads	1	Strategic Roads	2 Monthly	Driven
	2	Main Distributor	3 monthly	Driven
	2a	Main Distributor Urban	3 Monthly	Driven / Walked
	3	Minor Roads	Annually	Driven / Find and Fix
	3a	Minor Roads Urban	Annually	Driven / Find and Fix
Footway	1	Strategic Footway	4 Monthly	Walked
	2	Secondary Footway	Annually	Driven / Walked
Cycleway	A		6 Monthly	Driven / Cycled
	B		6 Monthly	Walked / Cycled

3.6.3 The adequacy of this inspection regime will be reviewed annually.

3.6.4 The basis of establishing the frequency of inspection is the balance between the rate of deterioration of the road and the degree of risk any defect has on road users.

### 3.7 RECORDING OF DEFECTS

3.7.1 During safety inspections all observed defects that constitute a degree of risk to users will be recorded. Depending on the degree of risk assessed these defects will be divided into the following two categories :-

Category 1 will be those that require prompt attention because they represent an immediate or imminent hazard or because there is a risk of short-term structural deterioration.

Category 2 will be all other defects

- 3.7.2 They will be repaired according to the timescales identified in Table 5. Details of intervention levels that will be applied are shown in Appendix 3.

### DEFECT REPAIR TIMESCALES

**TABLE 5**

Category	Description	Action	Timescale
Cat 1	Dangerous defects :- danger to life	1. Immediate make safe where practicable within 2 hrs. 2. By end of next working day. 3. Permanent repair	1. Signing and Guarding to protect public from defect (24hrs 7 days/week). 2. Temporary repair or First time permanent repair where possible. 3. Within 28 days.
Cat 1	Safety defects	2. Temporary repair or First time permanent repair where possible 3. Permanent repair	2. By end of next working day. 3. Within 28 days.
Cat 2	Defects	Timing depending on degree of deficiency, traffic volumes, location other works.	Planned within routine maintenance programme of works. Normally completed within 28 days.

### 3.8 SERVICE INSPECTIONS

- 3.8.1 Service inspections will be carried out primarily to identify deficiencies that compromise the reliability, quality, comfort and ease of use of the network. Although not intended for identifying defects that could compromise user safety, any such defects observed during service inspections will be recorded and dealt with in the same way as safety inspections.

- 3.8.2 Categories of Service Inspections available for use :-

- a. Machine Driven Surveys
- b. CVI (Course Visual Inspections)
- c. DVI (Detailed Visual Inspections)
- d. Inspections for Regulatory Purposes e.g. NRSWA

Details of the above types of service inspections are detailed in Table 6.

## SERVICE INSPECTIONS

TABLE 6

TYPE	DESCRIPTION	FREQUENCY
Machine Driven Surveys	<p>Scottish Road Maintenance Condition Survey (SRMCS) is carried out annually using machine survey techniques. At present it measures Texture, rutting and profile. Measurements for cracking and edge damage are to follow. 100% of A class roads will be surveyed annually, B and C class Roads will be surveyed bi-annually and all others will be surveyed every 4 years.</p> <p>The software that will analysis these results to full UKPMS (United Kingdom Pavement Management System) and produce information and maps of areas that are below the set criteria.</p> <p>These result also form part of our Statutory KPI returns for road condition.</p>	Annually by contract (WDM)
Course Visual Inspection	<p>Normally carried out from a slow moving vehicle. Rather than recording detailed measurements of individual defects, the survey identifies and categorises lengths of features having generally consistent defects.</p> <p>This survey would include all aspects of the network including Drainage, Embankments, Trees and Scrub, Fences, Traffic Signs and Road Markings</p>	<p>Annually after results of Machine Driven Survey are known.</p> <p>This may be undertaken in conjunction with safety inspection</p>
Detailed Visual Inspection	Records measured areas or lengths of more closely defined defects, aggregated within short sub-sections, 20 m in length.	Will generally only be undertaken if required to determine finite details of programmed maintenance projects
Inspection for Regulatory Purposes	<p>The most significant of which involves responsibilities under the New Roads and Streetworks Act.</p> <p>Management of List of Highways</p> <p>Dealing with illegal and unauthorised signs</p> <p>Skip permits, temporary closures and other authorised occupation of the road.</p> <p>Adoption of new roads</p>	<p>See inspection Code of Practice for New Roads and Streetworks Act</p> <p>} }AS }REQUIRED }</p>

3.8.3 Of the above types of service inspections, the following will be used regularly to establish a programme of maintenance :-

#### **3.8.3.1 Machine Driven Survey**

In partnership with all other Local Authorities in Scotland a programme that will examine the condition of our roads using a purpose built vehicle will be undertaken. This will not only give us information on the condition of our roads but also give us benchmark comparisons with the other Local Authorities.

The results of the survey are given in the form of three colour codes, (a) green when condition is acceptable, (b) orange when there defects need to be looked at and (c) red when defects are above the set levels.

The software used to view this information will also be used to determine the initial areas of the network that may require attention. Intervention levels can be set to suit the standards acceptable to the Council and to take account of available funding.

#### **3.8.3.2 Coarse Visual Inspections**

These will be carried out, by technical staff, on roads that are classified in orange and red categories. They will allow prioritisation of the maintenance works required to match available funding.

### **3.9 METHODOLOGY OF INSPECTION**

#### **3.9.1 Find and Fix**

3.9.1.1 This method of inspection will predominantly be used on Minor Roads.

3.9.1.2 The roads squad will travel selected routes at the prescribed frequency and identify defects that exceed the safety intervention levels. They will immediately repair those defects using specified methods. When a section of road has been travelled and repairs carried out a written dated statement from the squad chargehand that 'Road Made Safe' will be completed and recorded.

3.9.1.3 Find and Fix squads will also carry out immediate repairs to minor non-surface safety defects (such as obscured signs, blocked drainage etc.).

3.9.1.4 These repairs will also be recorded. Safety defects unable to be repaired immediately will be temporarily made safe and reported to the Roads Superintendent on the relevant forms.

#### **3.9.2 Qualified Inspector**

For all routes other than minor routes the normal mode of inspection will be by trained inspectors who will record all defects and pass the list of required actions to the relevant staff.

### 3.10 CONDITION STANDARDS

3.10.1 The manner in which the various defects impinge on the key objectives of safety serviceability and sustainability is shown in Table 7 below.

#### CONDITION OF NETWORK

TABLE 7

Key Objectives	Carriageway	Footway	Drainage	Verges / Trees
<b>Safety</b>	Nature and extent and location of surface defects. Nature and extent of edge defects. Nature and extent of defective surface skidding resistance.	Nature and extent and location of surface defects. Nature and extent of kerb and edging defects.	Accumulation of water on the carriageway and footways. Discharge of water onto carriageway / footway.	Obstruction to user visibility. Falling Branches and Trees. Overhanging branches.
<b>Serviceability</b>	Nature and extent of surface defects. Ride quality of the surface. Noise and vibration	Nature and extent of surface defects. Extent of encroachment of weed growth. The slipperiness of the surface. The quality of the surface. Integrity of the network.	Accumulation of water on the carriageway and footways. Serviceability and integrity of culverts and ditches.	Potential for service disruption.
<b>Sustainability</b>	Nature and extent of surface defects. Nature and extent of pavement defects..	Nature and extent of surface defects.	Inadequate drainage of the road structure will reduce effective life and increase maintenance liability.	Landscape conservation. Bio-diversity. Problems of root growth for surface structure and road drainage.

3.10.2 Each element of the network has been given a defined standard of condition, which is considered necessary to meet the requirements for safety, serviceability, and sustainability. Where it is not possible to meet these standards within the constraints of the available budgets, targets will be set for attaining and sustaining these standards in the long term. These standards will be consistently applied and will be reviewed at intervals in light of changing circumstances.

3.10.3 For full details of Condition Standards to be applied see Appendix 4.

## **4 MATERIALS AND TREATMENTS**

- 4.1 In order to meet the key objectives of Safety, Serviceability and Sustainability, it is important to ensure those materials, treatments and processes used for road maintenance meet consistent standards of quality. The "Specification of Highway Works" will be the main specification document used for this purpose.

Where discretion is allowed in the application of standards it is important not to set any unnecessarily high specification for materials and treatment standards. This will not only increase cost, but may reduce the potential for sustainability. Subject to risk assessment, relaxation of technical standards may be considered where it would bring significant benefits of sustainability.

It is also important to ensure that materials and treatments for any scheme are consistent with the character of the area.

Consideration will be given to recycling of materials whenever the opportunity arises.

## **5 PROCESSES**

### **5.1 QUALITY MANAGEMENT AND SECTOR SCHEMES**

- 5.1.1 The "application of Surface Dressing" and "Safety Barrier repair and replacement" are both subject to quality assurance regimes to ISO 9001 2000 with integrated systems for client and service provider. It is proposed to expand this regime over time to include all of the road service functions.

## **6 DEPOTS AND MATERIAL STORAGE**

- 6.1 Depots and materials storage areas should be managed to mitigate visual intrusion and to avoid pollution in accordance with legal and moral obligations.

## **7 STREET LIGHTING**

- 7.1 Standards for street lighting are generally covered in the specification within the present Street Lighting Maintenance Contract. This contract is due to be reviewed in the near future.
- 7.2 The issue of the condition of lighting columns has been recognised as a major problem and a program of replacement has been established using available capital funding. The present level of funding is insufficient to achieve sustainability and measures will have to be taken to overcome this.

## **8 MEASURING PERFORMANCE**

### **8.1 CONTINUOUS IMPROVEMENT**

In order to demonstrate continuous improvement, performance has to be continually measured and this is undertaken through performance indicators, standards and targets. These are defined as follows: -

**Performance Indicator**

The measure of performance in exercising a function

**Performance Standard**

The minimum acceptable levels of performance in the exercise of a function and measured by reference to a performance indicator for that function.

**Performance Target**

The level of performance in the exercise of a function that is expected to be achieved over a minimum period of a year and measured by reference to a performance indicator for that function.

**8.2 METHOD OF MEASURING**

Performance can be measured in a number of ways as follows: -

- 8.2.1 Input – the resources (human, material or financial) utilised in delivering the service.
- 8.2.2 Process – the methodology and procedure of committing the resources in pursuit of fulfilling the function.
- 8.2.3 Output – the resultant effect of completing the process with the resource input.
- 8.2.4 Outcome – the ultimate impact on the community and the best way of measuring performance.

**8.3 PERFORMANCE INDICATORS**

There are national indicators see Appendix 5 and local indicators that are set to reflect local priorities and provide key management information. Table 8 sets out some of the proposed local PI's. These will require ongoing development.

## PERFORMANCE INDICATORS AND TARGETS

TABLE 8

PI No.	Objective	Local Performance Indicator	Local Performance Target
LPI 1	To ensure that all defects which present a hazard to road users are identified and dealt with in order that the Council fulfils its statutory obligations with regards to road safety.	% Of Category 1 defects repaired by the end of the next working day.	To respond to all reported category 1 defects by the end of the next working day.
LPI 2	To determine the effect of the Maintenance Plan on the level of reactive maintenance required.	Reactive repairs as % of revenue budget.	To see year on year reduction in % of Revenue budget spent on reactive maintenance.
LPI 3	To determine the effectiveness and robustness of safety inspection regime and level of preventative maintenance carried out.	No. of public liability claims received per 100km of road network	To see a year on year reduction in number of public liability claims.
LPI 4	To determine the effectiveness of the routine maintenance programme.	No. of defects reported during safety inspections	To see a reduction in the number of defects as preventative maintenance is carried out.

## 8.4 BENCHMARKING

- 8.4.1 Benchmarking will be used to provide a means of comparing our performance with that of others. This will allow us to demonstrate improvement not only by comparison with our peers but also by comparing our current performance with our previous.
- 8.4.2 The main types of Benchmarking which will be used in terms of achieving Best Value are:-

<p><u>Data Benchmarking</u> Involves the use of inputs and or outputs for comparing performance, normally cost or measurement based.</p>	<p>APSE Performance Networks for Highways, Winter and Street Lighting is in use to achieve this and is made up of 40+ local Authorities from throughout the UK</p>
<p><u>Process Benchmarking</u> Is a means of comparing and measuring processes, sequences or activities involved in service delivery with those of an other organisation to identify how existing methods can be improved and best practice adopted.</p>	<p>We are members of the Celtic Benchmarking Club, comprising ourselves, the Roads Authorities of Glasgow, Edinburgh, Stirling, Perth and Kinross, South Ayrshire, West Lothian, Northern Ireland and the Isle of Man. Topics addressed to date include Winter, Construction Consents, St Lighting and Find and Fix.</p>

## **9 PROGRAMMING AND PRIORITIES**

- 9.1 Implementing effective systems for programming and prioritising road maintenance activities is a key part of this plan. The condition standards set out earlier, assume that the level of funding available will be sufficient to maintain these standards. When available funding clearly is not sufficient then re-programming and re-prioritising will become even more critical.
- 9.2 Establishing the various priorities will largely be determined by the outcome of safety and service inspections, assessed against Council policies.
- 9.3 For Routine Maintenance, priorities will be defined for all categories of work. Each category may be undertaken separately according to the frequency defined in each case but it will be more efficient to combine a number of operations into a co-ordinated programme. This will particularly apply to remote rural areas where travel plays a significant part in the operation. This may mean a delay in undertaking some works in order to achieve greater efficiency.
- 9.4 Programmed maintenance is undertaken primarily to provide sustainability of the network. It can also be undertaken for safety reasons e.g. to improve skid resistance. Programmed maintenance schemes are more expensive in the short term, but less expensive in the long term, than reactive treatments. They should minimise whole life cost. The determination of priorities will be objectively based and use accurate condition data. A rolling programme will be drawn up over the life cycle of the maintenance element being considered.

## **10 WINTER SERVICE OPERATIONAL PLAN**

### **10.1 INTRODUCTION**

Argyll & Bute Council has a statutory obligation, under Section 34 of the Roads(Scotland) Act 1984, to "...take such steps as it considers reasonable to, prevent snow and ice endangering the safe passage of pedestrians and vehicles over public roads in the Council area". By definition this includes carriageways, footways, footpaths, pedestrian precincts, etc.

It is the aim of Argyll & Bute Council to provide a service with respect to the above that will :-

1. Ensure the provision of a standard of treatment appropriate to the prevailing weather conditions.
2. Establish patterns of working which will produce the greatest benefit from the deployed resources with the view to reducing the level of risk and the extent of any delays to the public caused by adverse weather conditions.
3. At all times comply with the requirements of the Health & Safety at Work Act 1974.

## **10.2 WINTER SERVICE OPERATIONAL PLAN**

- 10.2.1 The Council will continue to approve, adopt and publish, in consultation with users and stakeholders, through the Director of Operational Services, a Winter Service Operational Plan based on the principles of the Code of Practice for Highway Maintenance.
- 10.2.2 The Operational Plan will define route treatment plans for carriageways, footways and cycleways. The general maintenance hierarchy will be adapted to cater for the specific circumstances of Winter Maintenance.
- 10.2.3 The Operational Plan will be co-ordinated with adjoining Local Authorities and Trunk Roads Operating Companies. Route planning and treatment regimes will be set to meet the road users reasonable expectations of consistency, whilst providing value for money.
- 10.2.4 The Operational Plan will be accompanied by a Procedures Document detailing the methods of management, control, reporting, recording and setting out the resources and areas of treatment required within the Plan.
- 10.2.5 A non-technical summary of the Operational Plan will be distributed to users, stakeholders and for general public consumption. Leaflets defining the four political Council Areas will highlight the plans for treatment, hours of operation and advice on safe use of the network.

## **10.3 WEATHER FORECASTING AND DETECTION SYSTEMS**

The Council will employ a Weather Forecast Provider to give a 24 hour forecast and consultation service. Use will be made of all available technology to enhance the monitoring of weather conditions and control resources effectively.

## **10.4 SERVICE DELIVERY AND TECHNICAL REVIEWS**

Annual reviews will consider the arrangements for the delivery of the Winter Service. Consultations between Council departments and contractors to ensure clear terms of reference for the provision and management of all resources, health and safety and insurance. All vehicles, plant, fuel provision, equipment and maintenance arrangements shall be checked in advance of the winter season to ensure full operational capacity.

## **10.5 WEATHER AND OTHER EMERGENCIES**

10.5.1 There will always be a need to make the highway safe after road accidents, for example dealing with oil spillage's and other damage. Requirements to close sections of the highway due accident or landslide will also involve the setting up of diversionary routes. Although considerable emphasis is given within highway maintenance to dealing with winter conditions, increasingly contingencies are necessary for a wider range of weather hazards. These involve:-

- (a) Flooding
- (b) High Winds
- (c) High Temperatures

10.5.2 Arrangements will be put in place to allow :-

- (a) Planning for and prediction of weather conditions likely to cause hazards.
- (b) The formulation of procedures to mitigate the formation of hazards and alleviate their effect on the use of the network.

10.5.3 Formulation of plans to notify the general public and other stakeholders of hazards causing disruption to the use of the network.

Drawing up of diversionary routes where practicable to redirect network users past hazards which cannot readily be removed.

10.5.4 In all cases when assessing the nature of the hazard, consideration will be given to the health and safety of, not only the network users, but also the Council's employees. It should be noted that in certain circumstances, the forces of nature are such that no safe practicable action may be available.

10.5.5 There are also a wide range of other civil emergencies in which Roads Services may be required to give logistical assistance. In these cases the plans, procedures and responsibilities are set out in the Council's Emergency Plan. The Council Emergency Planning Officer will co-ordinate interdepartmental arrangements and maintain plans drawn up in consultation with the Police and other emergency services.

## **11 ANNUAL BUDGET PROCESS**

### **11.1 ANNUAL PROCESS**

11.1.1 In order to calculate the true cost of maintaining our road network the following factors will be established: -

11.1.2. An inventory of all our assets will be completed/updated.

11.1.3 A condition standard will be set for each of the different road hierarchies including minimum timescales within which work should to be carried out.

11.1.4 A unit rate cost for each element of the work will be calculated annually using rates that can be benchmarked.

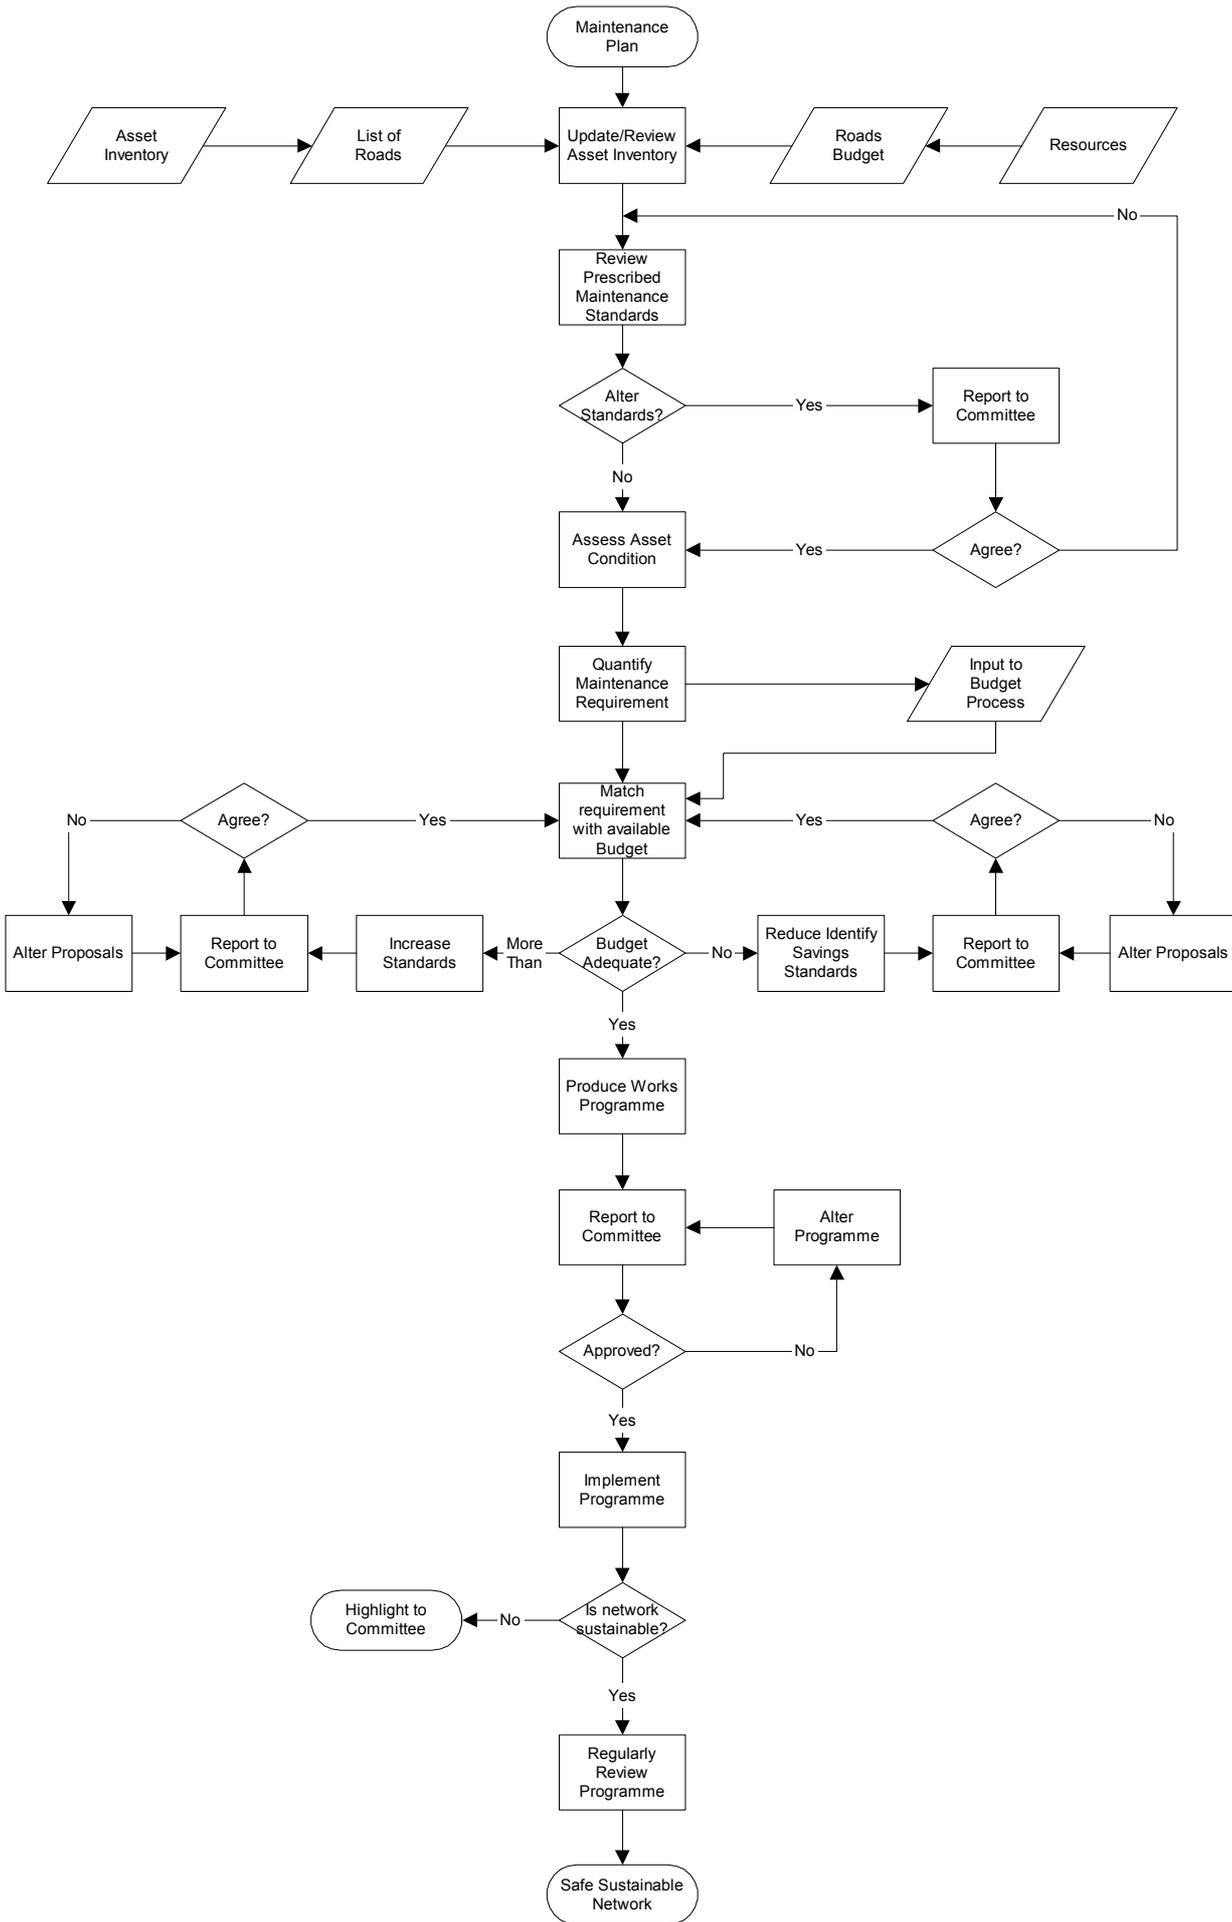

- 11.1.5 The average cost, over the preceding 3 financial years, for delivering the reactive services that can not readily be measured i.e. winter, emergencies potholing, patching will be calculated.
- 11.1.6 Formulae have been established for all measurable activities to calculate the total cost for carrying out the work together with an annual cost. These annual costs when added to the cost for delivering the reactive services leads to a total cost for delivering the comprehensive road maintenance service to a set specification. Details of all financial breakdowns are contained in Appendix 5.
- 11.1.7 These calculations will be undertaken annually and when budgets are allocated the effect of any shortfall will be calculated and reported to members.
- 11.1.8 Decisions will then be taken as to what elements of maintenance are curtailed and the effect on the sustainability of the network reported.

**11.2 OVERVIEW PROCESS MAP**

See over.

OVERVIEW

Process Map 1

# Appendix 1

## Road Hierarchy

## Appendix 1

Area	Sub Area	Town	Prefix 1	Road No	Road Name	Km	Maintenance Hierarchy
MKI	Mid Argyll		A	816	Lochgilphead-Oban Road	27.52	1
MKI	Mid Argyll		A	819	Inveraray - Dalmally Road	10.54	1
MKI	Mid Argyll	Inveraray	A	819	Croitville Road	0.24	1

# Appendix 2

## **Guide to Training Levels**

## TRAINING LEVEL PROFILES

Appendix 2

<b>Job Description</b>	<b>Main Duties</b>	<b>Preferred Education/Training Required</b>	<b>Experience</b>
Area Managers	To manage road maintenance network	Chartered Civil Engineering Member of Institute of Civil Engineers. IOSH Managing Health and Safety	Minimum of 7 years roads
Senior Engineer	To help manage road maintenance network	Chartered / Incorporated Civil Engineering Member of Institute of Civil Engineers IOSH Managing Health and Safety	Minimum of 5 years roads
Technical Officer	To help manage road maintenance network	Incorporated Civil Engineering IOSH Managing Health and Safety	Minimum of 3 years roads
Technician	To provide technical back up	HNC Civil Engineering	
Superintendent	To provide day to day control of roads squads	IOSH Managing Health and Safety HAUC Certificate	Minimum of 5 years roads
Inspector	To identify defects To control work of utilities	HAUC Certificate NRSWA / Moleseye Training	Minimum of 5 years roads
Chargehand	Hands on control of road squad	HAUC Certificate Appropriate skills training LGV Driver SVQ Winter Maintenance	Minimum of 3 years roads squad
Roadman	Road Maintenance	HAUC Certificate(30%) Appropriate skills training LGV Driver SVQ Winter Maintenance	

# Appendix 3

## **Defect Intervention Levels**

<b>Defect</b>	<b>Reasons for Classification / Intervention Level</b>
<b>Road</b>	
Subsidence	Potential for deep void
Sunken Track	If >40mm deep If > 100mm deep then 2 hr response
Failed Reinstatement	If >40mm deep and >150mm dia on carriageway If > 100mm deep and > 150mm dia then 2 hr response
Potholes Rank 1, 2, 2a Roads	If >40mm deep and >150mm dia on carriageway If > 100mm deep and > 150mm dia then 2 hr response
Potholes Rank 3, 3a Roads	If > 100mm deep and > 150mm dia
Potholes Rank1, 1a Footways	If > 25mm deep and > 150mm dia
Trip or Rocking Slabs	Sign and guard and programme repair when movement > than 40mm
Missing Ironwork Carriageway	If > 150mm dia.
Missing Ironwork Footway	All missing covers
Ponding Rank 1,2,2a	Affecting entire running traffic lane. In Winter when conditions liable to freeze
Water Discharge over Footway	In Winter when conditions liable to freeze
Flooding	If danger to vehicles or damage to property then 2 hr response
Blocked Gullies	When causing ponding or flooding
Damaged Pedestrian Barrier	If immediate danger to pedestrian or vehicles
Damaged Safety Fence	If immediate danger to pedestrian or vehicles

Defect	Reasons for Classification / Intervention Level
Lighting	
Open or Missing Doors to Columns / Pillars	2hr Response Electrical Danger
Broken or Low Wire	2hr Response Electrical and Physical Danger
Damaged Column in dangerous position	2hr Response Electrical and Physical Danger
Traffic	
Traffic Lights out of Action	Danger to road Users

Defect	Reasons for Classification / Intervention Level
Road	
Subsidence	Where no voids are evident
Sunken Track	If < 40mm but >25mm Deep
Failed Reinstatement	If < 40mm but >25mm Deep
Potholes Rank1, 2, 2a Roads	If < 40mm but >25mm Deep and > 150mm dia
Potholes Rank 3, 3a Roads	If < 100mm but >40mm Deep and > 150mm dia
Potholes Rank 1, 1a Footways	If < 40mm but >25mm Deep and > 150mm dia
Potholes Rank 2, 3 Footways	If > 40mm Deep and > 150mm dia
Open Joints	Program repair
Edge Failure	Program repair
Rocking Slabs	Program repair
Worn or stripping anti skid	Program repair
Missing Ironwork	On Carriageway < 150mm dia
Ponding	When no freezing probability
Water Discharge over Carriageway or Footway	When no freezing probability
Blocked Gullies	When not causing ponding or flooding
Damaged Pedestrian Barrier	When no immediate danger to pedestrians or vehicles
Damaged Safety Fence	When no immediate danger to pedestrians or vehicles

Defect	Reasons for Classification / Intervention Level
Traffic	
Missing or Worn Road Markings	Program repair/ replacement
Missing or Damaged Traffic Signs	Program repair/ replacement
Low Traffic Signs on Footway	Danger to Pedestrians
Signs obscured by Trees or Scrub	Program clearing obstruction
Groundworks	
Scrub or Grass obscuring Sightlines	Program response or via landowner
Low Trees overhanging Footways or Carraigeways	Program response or via landowner

# Appendix 4

## **Condition Standards**

CONDITION STANDARDS  
CARRIAGEWAYS

Appendix 4 1 of 11

Hierarchy Ranking	Location	Description	Condition Standard ( per 100m length)
1	Carriageway	Minor deterioration: - potholing, fine cracking, permeable surfaces, fretting of existing surfaces.	Where > than 30% of surface area then consideration of surface treatment.
		Major Deterioration: - Cracking, coarse crazing, serious loss of aggregate, serious permeability.	Where > than 10% of surface area Patch or surface treat Where > than 30% of surface area Patch or resurface.
		Previously patched surface resulting in numerous joints.	Where >40% then consideration for surface treatment.
		Loss of Skid Resistance / texture over whole surface area.	Consideration for Surface Dressing or other proprietary treatment.
		Edge Deterioration	>Than 20% of length of carriageway edge patching required. >Than 50% of length then Edge Strengthen and or kerb.
		Wheel Track rutting	>20mm deep over 10% of length then patch or local resurfaces. >20mm deep over 90% of length of road then Reshape effected lane

CONDITION STANDARDS  
CARRIAGEWAYS

Appendix 4 2 of 11

Hierarchy Ranking	Location	Description	Condition Standard ( per 100m length)
2 / 2a	Carriageway	Minor deterioration: - potholing, fine cracking, permeable surfaces, fretting of existing surfaces.	Where > than 30% of surface area then consideration of surface treatment.
		Major Deterioration: - Cracking, coarse crazing, serious loss of aggregate, serious permeability.	Where > than 15% of surface area Patch or surface treat Where > than 40% of surface area Patch or resurface
		Previously patched surface resulting in numerous joints.	Where >50% then consideration for surface treatment.
		Loss of Skid Resistance over whole surface area.	Consideration for Surface Dressing
		Edge Deterioration	>Than 20% of length or area of carriageway edge patching required >Than 50% of length or area then Edge Strengthen and or kerb
		Wheel Track rutting	>20mm deep over 25% of length then patch or local resurfaces. >20mm deep over 90% of length of road then resurface effected lane

CONDITION STANDARDS  
CARRIAGEWAYS

Appendix 4 3 of 11

Hierarchy Ranking	Location	Description	Condition Standard ( per 100m Length)
3 / 3a	Carriageway	Minor deterioration: - potholing, fine cracking, permeable surfaces, fretting of existing surfaces.	No specified minimum standard.
		Major Deterioration: - Cracking, coarse crazing, serious loss of aggregate, serious permeability.	Where > than 25% of surface area Patch and surface treat Where > than 50% of surface area Patch or resurface
		Edge Deterioration	>Than 50% of length of carriageway edge patching to be considered
		Wheel Track rutting	>40mm deep over 90% of length of road then resurface effected lane

CONDITION STANDARDS  
FOOTWAYS

Hierarchy Ranking	Location	Description	Condition Standard
1	Footways	Course cracking of the surface. Course crazing, depressions > than 25mm	If affecting over 40 % of surface area then consideration for surface treatment
2	Footways	Course cracking of the surface. Course crazing, depressions > than 25mm	Where >40% then consideration for surface treatment.

CONDITION STANDARDS  
DRAINAGE

Appendix 4 4 of 11

Hierarchy Ranking	Location	Description	Condition Standard
1//2a/3a	Culverts	Culverts and manholes and Silt Traps	Inspected and Cleaned annually.
2		Culverts and manholes and Silt Traps	Inspected and Cleaned every two years.
3		Culverts and manholes and Silt Traps	Inspected and Cleaned every three years.
1/2/2a/3/3a	Offlets	Drainage offlets from carriageway	Cleaned annually
1	Ditches	Road drainage ditches and cut off ditches	Inspected and Cleaned every 3 years `
2/2a	Ditches	Road drainage ditches and cut off ditches	Inspected and Cleaned every 4 years
3/3a	Ditches	Road drainage ditches and cut off ditches	Inspected and Cleaned every 5 years
all	Gullies	Cleaning of Gullies	Cleaned 3 times every 2 years
1	French Drains	Inspecting and Jetting	Inspected and Jetted every 3 years
2/2a	French Drains	Inspecting and Jetting	Inspected and Jetted every 4 years
3/3a	French Drains	Inspecting and Jetting	Inspected and Jetted every 5 years

CONDITION STANDARDS  
DRAINAGE

Appendix 4 5 of 11

Hierarchy Ranking	Location	Description	Condition Standard
1	French Drains	Replace Filter Material	Replace Filter Material as required but at min of 1 in 10 yrs
2/2a	French Drains	Replace Filter Material	Replace Filter Material as required but at min of 1 in 15 yrs
3/3a	French Drains	Replace Filter Material	Replace Filter Material as required but at min of 1 in 20 yrs
1	Drainage Pipework	Inspecting and Jetting	Inspected and Jetted every 3 years
2/2a	Drainage Pipework	Inspecting and Jetting	Inspected and Jetted every 4 years
3/3a	Drainage Pipework	Inspecting and Jetting	Inspected and Jetted every 5 years

CONDITION STANDARDS  
GRASS VERGES / WEED KILLING

APPENDIX 4 6 of 11

Hierarchy Ranking	Item	Description	Standard
1	Grass Cut	Cut verges	2m swathe twice per year June and August September. Also identified sight lines
2/3/3a	Grass Cut	Cut Verges	1m swathe twice per year June and August September. Also identified sight lines. 2 m swathe on a 1 in 4 year cycle to reduce scrub growth.
1/2a	Grass Cut	Amenity cut in built up areas	4 times per year to areas as per schedules.
1	Weedkilling	Spray French drains for weed prevention with approved weedkiller	Once per year.
2/3	Weedkilling	Spray French drains for weed prevention with approved weedkiller	Once every 3 year.
1/2a	Weedkilling	Urban areas Spray for weed prevention with approved weedkiller Kerbs and Heel Kerbs	Once per year.
3	Weedkilling	Rural footways Spray for weed prevention with approved weedkiller Kerbs and Heel Kerbs	Spray for weed prevention with approved weedkiller Kerbs and Heel Kerbs.

CONDITION STANDARDS  
TRAFFIC SIGNS

Appendix 4 7 of 11

Hierarchy Ranking	Item	Description	Standard
1/2/2a/3a	Traffic signs	Physical condition / integrity of Signs	As Required for Safety should be inspected annually
3		Physical condition / integrity of Signs	As Required for Safety should be inspected every two years
All		Replacement and repair of damaged signs and bollards	Normally Treated as Cat 1 or 2 safety defect

CONDITION STANDARDS  
ROAD MARKINGS

Appendix 4 8 of 11

Hierarchy Ranking	Item	Description	Standard
All	Road Markings	Replacement after Surface Treatment or Surface replacement	All mandatory markings that existed prior to treatment should be replaced as soon as reasonably practicable after completion of works. If not possible signage or temporary marking must be provided in areas where their absence could lead to danger.
1/2 and known accident black spots		Worn Markings	Should be replaced when >40% of their area becomes ineffective or worn away. Or after five years
2a		Worn Markings	Should be replaced when >50% of their area becomes ineffective or worn away. Or after seven years.
3/3a		Worn Markings	Should be replaced when >50% of their area becomes ineffective or worn away. No set minimum replacement.

CONDITION STANDARDS  
FENCES AND BARRIERS

Appendix 4 9 of 11

Hierarchy Ranking	Item	Description	Standard
All	Safety Fence.	Tensioning of bolts checked and reset to correct torque.	Every two years.
All	Safety Fence	Damage	Treated as Cat 1 defect unless damage is obviously superficial then program repair.
footway 1 & 2	Pedestrian Guard-rail	Damage	Treated as Cat 1 defect unless damage is obviously superficial then program repair.

CONDITION STANDARDS  
TRAFFIC SIGNALS

Hierarchy Ranking	Item	Description	Standard
All	Traffic Lights	Defects in operation.	Treat as Cat 1.
All	Traffic Lights	Urgent Faults	Treat as Cat 1- 2 hrs response where practicable. The use of temporary lights may be required.
All	Traffic Lights	Faults	Repair within one week.
All	School Crossing Patrol Signals	Faults	Repair by end of next working day during term time.

CONDITION STANDARDS  
STREET LIGHTING REQUIRED TO COMPLY  
WITH 16<sup>TH</sup> EDITION WIRING REGULATIONS

Appendix 4 10 of 11

Hierarchy Ranking	Item	Description	Standard
1,2a,3a	Distribution pillar	Preventative maintenance 1. check all terminals 2. Clean 3. Check earthing 4. Grease all moving parts	Minimum of once in every four years.
1,2a,3a	St Lighting Column	Preventative maintenance 1. check all terminals 2. Clean 3. Check earthing 4. Grease all moving parts 5. Assess column condition	Minimum of once in every four years.
1,2a,3a	Circuit testing	Preventative maintenance 1. Continuity test 2. Insulation resistance test. 3. Polarity Test 4. Earth loop impedance test 5. Earth electrode test 6. Marking circuit diagram	Minimum of once in every four years.
1,2a,3a	St Lighting Lamp Change	Change lamps	Minimum of once in every 3.5 yrs

IF THE CONDITION STANDARDS FOR  
CARRIAGEWAYS ARE ACHIEVED  
THE FOLLOWING SHOULD RESULT

Appendix 4 11 of 11

<b>Hierarchy Ranking</b>	<b>Location</b>	<b>Description</b>	<b>Condition Standard</b>
1	Carriageway	Resurfacing of Carriageway	1 in 40 years
2	Carriageway	Resurfacing of Carriageway	1 in 45 years
2a	Carriageway	Resurfacing of Carriageway	1 in 50 years
3	Carriageway	Resurfacing of Carriageway	1 in 70 years
3a	Carriageway	Resurfacing of Carriageway	1 in 75 years
1	Footway	Surface Treatment of Footway	1 in 25 years
2	Footway	Surface Treatment of Footway	No set standard
1	Carriageway	Surface Dressing of Carriageway	1 in 12 years
2	Carriageway	Surface Dressing of Carriageway	1 in 15 years
2a	Carriageway	Surface Dressing of Carriageway	1 in 15 years
3	Carriageway	Surface Dressing of Carriageway	1 in 20 years
3a	Carriageway	Surface Dressing of Carriageway	1 in 25 years

ARGYLL &amp; BUTE COUNCIL

Roads Short Life Working Group

DEVELOPMENT AND INFRASTRUCTURE SERVICES

11 March 2013

---

**Roads Maintenance Plan/Roads Operations Revenue Budget 2013/14**

---

**1. PURPOSE**

- 1.1 This report sets out the reduction in road maintenance revenue activities that will be delivered in 2013/14 and 2014/15 as a result of reduced revenue budget provision.
- 1.2 This report details the Roads Operations Revenue Budget in line with the Roads Maintenance and Asset Management Plan.

**2. RECOMMENDATIONS**

- 2.1 That the report be noted.

**3 DETAILS**

- 3.1 The Roads Operations Budget is proposed in line with the Roads Maintenance and Asset Management Plan (RAMP). The RAMP is based on a Code of Practice for managing roads maintenance which is used across the UK. The RAMP sits under the Roads Maintenance and Management Strategy which is founded on spending money wisely and also aligns with Audit Scotlands follow up report on roads maintenance which recommended that: *“Transport Scotland and councils should review their road maintenance strategies and plans to confirm that adequate prioritisation is given to those routes which are likely to contribute greatest to economic growth and improved quality of life.”*
- 3.2 The existing RAMP came into place in 2004 and sets out a minimum level of roads maintenance against a road hierarchy. The three main criteria used for prioritising works are safety, serviceability and sustainability with safety being the most important. Updates to the RAMP are to be considered by the Roads Short Life Working Group.
- 3.3 The RAMP sets out the level of maintenance that is required, for each different roads maintenance activity, to properly maintain the road network. However the available revenue budget is currently insufficient to allow all the required works to be fully undertaken. In order to make best use of the available budget an assessment on a risk basis is carried out to determine the most appropriate level of spend on each activity.
- 3.4 In order to show what level of service can be provided for each activity a unit rate (cost) is calculated for undertaking units of work i.e. a square metre of patching or a metre of ditch cleaned. From this the overall and annual cost for a service in line with the RAMP can be calculated.
- 3.5 Current year budgets are not sufficient to allow works to be completed at the desired frequency set out in the RAMP. The budget reductions for 2013/14 and 2014/15 will further reduce the amount of work that can be completed.
- 3.6 The available budget apportioned to each activity is divided by the unit rate for that activity to give the amount of work that can be achieved within the budget. The units achieved will be reported back to Business Days on a quarterly basis and a full analysis provided at the end of the year to show the actual work achieved against the forecast. Appendix 1 details the targeted quantity as set out in the RAMP and the quantity targeted within the available budget. The actual quantities will be added through the year to report on what has been delivered. This also shows the difference of what can be achieved with the available budget and the desired quantity set out in the RAMP.
- 3.7 The savings resulting from the 2013/14 budget process are £255,000 in financial year 2013/14 and a further £255,000 in financial year 2014/15 (a total saving of £510, 000). Saving will be made from reduction in revenue funded maintenance works with commensurate reduction in staff & operative posts, vehicles and reduced materials. This will result in a reduction in the level of planned roads maintenance undertaken and a reduction in winter maintenance and severe weather resilience. There will be a greater requirement to prioritise roads maintenance revenue works based upon safety priorities and risk assessment with a reduced ability to undertake sustainable asset management as identified through the Roads Asset Management Plan.
- 3.8 The budget is split to allow for a more planned approach rather than being reactive. More of the budget therefore is put into activities such as right first time patching and drainage to avoid reactive spends on potholing and flooding.
- 3.9 In order to monitor the effectiveness of how budgets are expended the following are in place:
  - Where possible all works instructions will be quantified and priced using the Roads Management System WDM;
  - The WDM system allows monitoring to be carried out of productivity and unit rates against the target productivity and unit rates;
  - Budget profiles are set for each budget line and are used to manage actual expenditure against available budget. Appropriate action can then be taken to achieve a level of performance within the available budget.

- 3.10 It should be noted that, although the budget profile is set out for the financial year, circumstances may change due to severe weather or other unexpected events. It may be necessary to make changes to activity budgets to cope with these events.
- 3.11 The 4 area budgets shown in Appendix 1 are based on the budget level for 2012/13 with 2013/14 and 2014/15 budgets based on the approved savings. These savings will lead to a reduction in staffing levels with the subsequent drop in service levels.

#### 4.0 IMPLICATIONS OF THE BUDGET REDUCTION

- 4.1 The Road Maintenance budget for 2012-13 has reduced by 18.6% since 2010/11 (following Service Review process). The Roads Operations saving from the budget process will reduce the budget in comparative terms to 23.9% of the 2010/11 budget level when fully implemented.
- 4.2 Based on a planned capital expenditure of £6.1M for 2013/14 & 2014/15 (the balance of the £21M previous budget allocation which accelerated in 2012/13 minus professional fees), the combined capital & revenue budget will reduce from 56% of Roads Asset Management Plan requirements to 53.6% of requirements across Argyll and Bute. In terms of revenue maintenance works, the scale of planned/reactive maintenance works such as grass cutting, ditching, gully emptying will reduce from the current figure of 67% of scheduled maintenance works identified within the RAMP, to 60% of scheduled maintenance.
- 4.3 The tables below show the impact of the 7% reduction in terms of : combined capital & revenue, and revenue only. In 2015/16 the combined capital & revenue figure will drop more significantly as there will be circa £1.2M less roads reconstruction capital expenditure.

##### Combined Capital and Revenue – Argyll and Bute Totals

Area	RAMP Requirement	Standstill	255K (half year saving)	510K (full year saving)
Combined Capital and Revenue Totals	£ 19,458,764	£ 10,935,222	£ 10,680,220	£ 10,425,222
% as / Plan	<b>100%</b>	<b>56.2%</b>	<b>54.9%</b>	<b>53.6%</b>

##### Revenue Only Totals

Area	RAMP Requirement	Standstill	255K (half year saving)	510K (full year saving)
Revenue Totals	£ 7,017,269	£ 4,735,000	£ 4,480,000	£ 4,225,000
% as / Plan	<b>100%</b>	<b>67.5%</b>	<b>63.8%</b>	<b>60.2%</b>

(Figures from Roads Ops Manager)

## 5 CONCLUSIONS

- 5.1 The available Roads Maintenance revenue budget will be allocated across the different maintenance activities to make best and efficient use of this budget. The spend and productivity will be closely monitored throughout the year and any required changes or improvements made in a timeous way.

## 6. IMPLICATIONS

- 6.1 Policy The Roads Maintenance and Management Strategy is the overarching policy for roads maintenance.
- 6.2 Financial Revenue budget is below that required in line with RMP. Any further savings will result reduction in service levels.
- 6.3 Personnel Roads Operations assisted by Amenity Operatives
- 6.4 Equalities Impact Assessment none
- 6.5 Legal None
- 6.6 Risk Deterioration of road network if budget not spent effectively

6.7 Customer Service Maintains service level commitment set out in Service plan

**7. APPENDICES**

Appendix 1 Budget proposals for the 4 Area Committees - for 2013/14 and 14/15.

Jim Smith  
Head of Roads and Amenity Services
