

Delegated or Committee Planning Application Report and Report of handling as required by Schedule 2 of the Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2008 relative to applications for Planning Permission or Planning Permission in Principle

Reference No: 11/01066/MFF
Planning Hierarchy: Local Development
Applicant: Lakeland Marine Farms Ltd.
Proposal: Relocation of Ardmaddy fish farm - comprising 12 No. 100m circumference cages plus installation of feed barge
Site Address: Port Na Morachd, Seil Sound

DECISION ROUTE

Local Government Scotland Act 1973

(A) THE APPLICATION

(i) Development Requiring Express Planning Permission

- Formation of Marine Salmon Fish Farm comprising 12 No. 100m circumference cages, walkways, mooring grid and associated lines,
- Installation of feed barge;
- Installation of underwater lighting.

(ii) Other specified operations

- Servicing from existing shore bases at Loch Craignish and Croabh Haven;
 - Removal of 18 No. 24m x 24m steel cages from existing site at Ardmaddy North and relinquishment of lease.
-

(B) RECOMMENDATION:

It is recommended that permission be granted subject to:

- a pre-determination hearing be convened in response to the number and complexity of the representations received;
 - the conditions and reasons set out in this report.
-

(C) CONSULTATIONS:

Scottish Environment Protection Agency (27.07.11 & 11.12.12) – In order to address the likelihood of significant effects upon the Firth of Lorn Special Area of Conservation (SAC) SEPA will require to undertake a Habitats Directive ‘appropriate assessment’ as part of its Controlled Activities Regulations (CAR) licence application, and until this

process is completed it is not possible to say whether the biomass proposed will be licensable under CAR. Subsequent response in 2012 confirming that a CAR licence has been granted and supplying a copy of the 'appropriate assessment' undertaken by SEPA in support of that consent.

Comment: Pollution control is exercised by SEPA and government advice to planning authorities is not to seek to use the planning process to duplicate other regulatory regimes. Where multiple consents are necessary there is no prescribed order in which they should be obtained. However, in view of the importance of potential pollution effects upon protected habitats and species in this particular case, and given the large numbers of representations to the planning application being related to pollution issues, the applicants were advised by planning officers to agree to this planning application being held in abeyance, in order to allow them to pursue a CAR licence application in advance of the determination of the planning application, so that that the consequences of pollution could be assessed by the appropriate agency and conclusions reached, outwith the planning process. An application was duly submitted and processed by SEPA, who undertook a Habitats Regulations 'appropriate assessment' in the consideration of that application. In view of the number of adverse third party representations to the CAR licence application, the intended decision by SEPA was the subject of review by Scottish Ministers before being issued. No intervention in the intended course of action arose as a consequence of this and a CAR licence was duly granted.

Scottish Natural Heritage (28.08.11 & 26.02.13) – in view of the likely significant effect on the Firth of Lorn Special Area of Conservation the planning authority is advised to undertake an 'appropriate assessment' having regard to the conservation objectives of the SAC addressing the transport of organic wastes and chemotherapeutants from the site. Further comment will be made once the AA has been concluded.

In terms of European protected species the proposal has the potential to affect otters and cetaceans. It is not expected that the site would affect otters significantly. The deployment of acoustic deterrent devices to deter seals could have consequences for porpoises as whilst research indicates that they will avoid areas where ADD's are in operation (but will return once they are switched off), continuous operation could have the effect of excluding them from the Sound. SNH consent should therefore be required for the deployment of ADD's at this location. Whilst the faunal analysis of the seabed shows a relatively diverse and abundant community no benthic impacts prejudicial to national interests have been identified. Predators such as seals, otters and piscivorous birds are common in this locality. The applicant considers that double nets are impractical in this location due to strong tidal currents and SNH concurs that tensioned nets with anti-chafe panels as employed at many other sites will be sufficient to minimise risk of escapes. The applicant's predator control plans and risk assessments require some updating (*subsequently completed*). Whilst there are no salmon rivers within 15km, sea trout will frequent the area year round. Sea lice treatments to SSPO Code of Good Practice Standards and operation in accordance with the local Farm Management Agreement will minimise impacts on wild fish, as will the intended use of well boats for chemical treatments, rather than the more traditional tarpaulin method employed at the existing site. White cluster anemone is present in the vicinity of the site and the SEPA CAR assessment should address consequences for this Priority Marine Species.

In terms of landscape impacts as the proposal does not affect any national designations SNH has no objections on landscape, visual or recreational/amenity grounds. Localised impacts could be reduced by repositioning the barge to the south end of the site where it would be better screened by higher ground on Torsa to the west. Whilst the area is frequented by tour boats, yachts and kayaks and the development will give rise to

localised impacts these are not considered to be such that they will significantly affect the overall experience of the Sound and the wider Firth of Lorn.

Following the production of the Council's draft 'appropriate assessment' SNH has confirmed its satisfaction with the content.

Comment: The option of relocating the feed barge to the southern end of the site has been resisted by the applicants, as for operational reasons a barge location at the least exposed end of the site is preferable as it presents less risk to containment in the event of the barge moorings being compromised in storm conditions. The applicants have however agreed to reduce the scale of the barge from 26m x 18 m to 14m x 10m in order to lessen its visual impact and amended plans to that effect have been submitted.

Marine Scotland Science (02.08.11) – No objection. Note the intention to use well boats for sea lice treatments and the potential to use Wrasse as a supplementary means of lice control. There are no major Atlantis salmon fisheries within 15km so wild salmonids in this area are likely to be marine phase sea trout throughout the year and migrating salmon. Provided the site is operated in accordance with the existing Farm Management Agreement for the area, in accordance with the SSPO Good Practice Guidelines and the necessary steps are taken to control lice numbers and to maintain equipment to minimise risk of escapes, then impacts upon wild fish will be minimised. It is recommended that it should be a condition of any consent that the existing site at Ardmaddy North is relinquished.

Argyll & District Salmon Fishery Board (11.07.11) – No specific objections but it is noted that the development involves a significant increase in biomass and that it would be preferable for this to be maintained in the initial period following relocation to enable the applicant to demonstrate that SSPO Code of Good Practice sea lice levels can be achieved. In the event of an approval, it should be a requirement that the current site be closed and the lease surrendered.

Historic Scotland – response awaited.

Northern Lighthouse Board (08.07.11) – no objection but advice given as to navigation marking and lighting requirements.

Royal Yachting Association – have indicated verbally that they have no comment to make in respect of the planning application and that they will reserve any comment for the Marine Licence application as and when that is submitted.

Clyde Fishermen's Association (21.07.11) – object to further development of the wider fish farming industry in general and this application in particular due to the adverse consequences of pollution in the marine environment and the general unsustainability of farming fish.

Mallaig & North West Fishermen's Association – no response

Council's Marine & Coastal Manager (10.08.11) – the scale of the existing and proposed sites are similar in terms of surface equipment area and the characteristics and designations of the landscape are similar for both sites although the proposed site occupies a more confined section of the sound, where its visual presence may be increased. The RYA sailing route hugs the west side of the channel and the proposed site does not conflict with this. The Marine Licence process will address navigational issues. Risk to wild salmonids is unlikely to significantly increase if the Farm Management Agreement continues to be adhered to and the proposed mitigation is implemented, given that Marine Scotland considers the modelled availability of sea lice

treatment to be sufficient for the biomass proposed. SEPA's CAR licence process will include consideration of potential effects on the Firth of Lorn SAC. Three seal haul outs are within 2km although the applicant's three sites around Shuna are closer to larger haul outs. The use of Acoustic Deterrent Devices in narrow water bodies may restrict the use of the area by cetaceans and advice should be sought as to whether a licence from SNH would be required for their deployment.

Council's Biodiversity Officer (25.07.11) – no objection but further comment sought about potential effects upon marine species. Concern that the proposal will reduce the width of the channel available for dolphin and porpoises.

Scottish Wildlife Trust (26.09.11) – objects to the development on the grounds that in the absence of an Environmental Impact Assessment there is insufficient information to enable the required Appropriate Assessment in terms of implications for the Firth of Lorn Special Area of Conservation, and therefore the process is unsound. The SAC is of international conservation importance and the wildlife it supports is of tourism value. For development to proceed, it must be concluded beyond reasonable scientific doubt that the implications for the protected rocky reef habitat and the species it supports will not have an adverse impact on the integrity of the SAC. Failure to employ double nets and the consequent need to employ acoustic deterrent devices or the licenced shooting of seals, would not lead to seal shooting as a 'last resort', as legislation requires. Porpoise dolphin and otter use the sound regularly and would be disturbed by the deployment of ADD's. Local wild salmon and sea trout stocks have collapsed in recent years and sea lice associated with the development will be likely to adversely affect these protected species. The transport of organic waste and chemotheraputants from the site to the SAC would be contrary to its conservation objectives and would adversely affect the integrity of the designation. Given the presence of rock reefs and complex tides, conventional deposition modelling is not an appropriate method for predicting likely effects. Priority Marine Features such as white cluster anemone to the north of the site are likely to be affected reducing their value as dive sites contrary to the interests of the tourism economy.

Kilninver & Kilmelford Community Council (14.02.13) – have objected to the proposal on the grounds that the development will cause noise light and water pollution, and lead to rubbish being washed up on local beaches. It is also considered that the development will disadvantage the local tourism economy and could pose a threat to navigation and the interests of wild fish. The community support smaller scale aquaculture developments but consider that this is too prominent and conspicuous site for the scale of development proposed.

Seil & Easdale Community Council (04.08.11) – have objected to the proposal on the grounds that the area is one of scenic value and of importance to yachts, tour boats and other recreational craft, which collectively support the local tourism economy. The presence of the farm would narrow the channel and make it more difficult to avoid the rocks off Torsay Island (*sic*). There is concern locally that the development will not be in the interests of wildlife tourism, and also that consent for additional pollution is being sought given the expense of the Seil waste water treatment scheme. It is recognised that the Council has to balance economic arguments with the environmental disbenefits of the proposal, but that in this case protection of the environment should prevail. If the development proceeds, consideration should be given to reducing projection out into the channel, reducing the impact of the feed barge, using double netting as opposed to seal scarers and control over lighting.

Luing Community Council (02.08.11) – object in terms of concerns they have as to the effects of the proposal upon wildlife, tourism, sailing and recreational activities due to pollution in the vicinity of Luing and the Firth of Lorn Special Area of Conservation.

Luing is heavily dependent upon tourism which is a key provider of employment on the island unlike fish farming. They urge that an environmental impact assessment and appropriate assessment should be used to inform the decision.

(D) HISTORY:

The site benefits from a Crown Estate lease for a mussel farm (AR-3-6-17) although the site is not currently equipped. No objection was raised by the Council to that development (03/00843/MFF).

A Crown Estate lease is in place for a salmon farm to the north of the site at Ardmaddy North (AR-3-6-6). This is currently equipped by 18 No. 24m x 24m steel cages.

The application site benefits from a CAR licence CAR/L/1099909 granted in December 2012.

It is intended that the proposal will supersede the shellfish site and that the lease for nearby fin fish site, which is also in the control of the applicants, would be relinquished and the equipment removed, in the event that this larger replacement farm at Ardmaddy South is consented.

(E) PUBLICITY:

The proposal has been advertised in the local newspaper (14.07.11 and 25.08.11) with the publicity periods having expired on 15.09.11.

(F) REPRESENTATIONS:

(i) Representations received from:

Objections to the proposal have been received from 814 third parties along with 8 supporters and 2 neutral representations. Names and addresses of those having submitted representations are listed in an Appendix this report. The grounds of objection and support are summarised below. It should be noted that a very high proportion of the objections take the form of standard template letters and e-mails.

Support for the proposal

- Aquaculture is an industry of the future and regulation in Scotland is amongst the highest in the world;
- Fish farming is a valued component of Argyll's and Scotland's economy providing opportunities for growth in a region where other opportunities are limited;
- The development presents opportunity to maintain or create jobs, both directly and indirectly;
- Fish farming produces a valuable product in the global market place, is one of our few export success stories and should be supported;
- The unscientific clichés advanced by objectors are misleading and inaccurate. When reviewing public comments please remember that many, including young people, are dependent on the aquaculture sector.

Objections to the proposal

Application documentation and procedure

- The scale of the site relative to the existing site has been misrepresented by the applicant who has advanced it as a reduction whereas in practice it represents an enlargement. It is requested that the location of the site should be marked by buoys for the purposes of any committee site inspection;
- The Planning Authority have described the proposal as a relocation of an existing site whereas it is actually a new enlarged site. It cannot be legitimately regarded as a relocation given the difference in scale;
- The applicants refer to the site having an existing use as a mussel farm whereas the site is not in use and has not been in use previously for this purpose;
- The application ought to have been accompanied by an Environmental Impact Assessment;
- The application ought to be subject to 'appropriate assessment'.

Comment: The application has been described by the applicant as a relocation as the intention is that it should be a replacement for their existing fish farm at Ardmaddy. Likewise, it was advertised by the Planning Authority as a 'relocation' so as not to mislead interested parties into believing that a second farm was proposed in the locality of the existing site. In order to clarify that the proposed development is intended to be an enlarged facility (rather than a straight replacement for the equipment at the existing site), the proposal was advertised a second time, in order to make entirely clear the nature of the equipment proposed.

The aggregate area of the surface equipment is a reduction in that at the existing site, although the extent of the overall surface area of the site is greater, as circular cages have larger intervening areas of water than the more compact arrangement of square pens found at the existing site.

Although the site has not been equipped for mussel farming it maintains a Crown Estate licence for such and would be capable of being so used without the requirement for further consent. The existence of the licence and the ability to occupy the site in accordance with the terms of the lease is a material planning consideration.

The proposal was 'screened' for the requirement for an Environmental Impact Assessment by the Planning Authority in advance of the application being submitted. Following consultation with interested bodies such as SEPA, SNH and Marine Scotland it was determined that as a relocation and enlargement of an existing site, an Environmental Statement would not be required in this particular case.

To satisfy the requirements of the Habitats Regulations, an 'appropriate assessment' has been carried out by the Planning Authority drawing upon the conclusions of the appropriate assessment undertaken by SEPA in the processing of their CAR licence. This appears at Appendix B to this report.

Objections founded on planning policy considerations

- The development would be harmful to a designated Area of Panoramic Quality and the Firth of Lorn Marine Consultation Area which are designations intended to

protect the local environment.

Comment: Consideration of the effect of the development on the landscape and seascape of Seil Sound is required in the context of that associated with the current fish farm equipment. Local Plan policy LP ENV 10 accords the scenic qualities of the area regional importance. However fish farms are commonly located in scenic designation in Argyll, including National Scenic Areas which are accorded higher status in landscape terms. The development plan status of the area is not such as to preclude development but requires careful consideration of the landscape implications of development. The Firth of Lorn Marine Consultation Area is one of biodiversity interest prompting consultation with Scottish Natural Heritage. It is not a development plan designation which presumes for or against development.

Objections related to pollution considerations

- The doubling of biomass will increase the problems presented by the existing farm and will threaten sensitive marine ecosystems. Sites of this scale should be located further offshore and inshore sites should be operated at reduced stocking densities with enhanced containment;
- The site will produce large quantities of faecal waste well in excess of the produced by the local community and this should be considered in connection with that produced from consented fish farm sites in the area in terms of its cumulative consequences for the environment;
- The proposal will lead to excesses of nitrates, phosphates and other pollutants will contribute to a return to inappropriate levels of pollution in the Sound (in part addressed by the Seil wastewater treatment works). Given the £11m spent on upgrading the sewage treatment system for the small community at Seil in order to improve water quality in Seil Sound, it is perverse to countenance such an additional polluting form of development.
- Although a CAR licence has been granted by SEPA, they do not have the resources to regularly monitor sites so the industry is largely self-regulating which is worrying. There is reason to suspect that SEPA's conclusions were flawed being based on the application of a standard computer model which may not reflect the specific local conditions.
- The applicants existing site has in the past been graded 'unsatisfactory' due to impacts on the seabed extending beyond SEPA's allowable zone for deposition about the cages. Whilst the applicant and SEPA consider that the new site exhibits better characteristics this conclusion relies on modelling which is not suited to contained stretches of water with wide variations in speed and direction. As modelling did not appear to represent actual experience at the existing site, there is doubt about its reliability here.
- The means by which mass and routine fish mortalities are to be disposed of has not been addressed as part of the application;
- The applicants have in 2006 previously pleaded guilty and have been fined £1000 for overstocking a site at Shuna.

Comment: Concerns regarding the polluting effects of development and the associated consequences for habitats and species appear to be the principal grounds for objection to the application. Although there is multiple consenting regime applicable to fish

farming, there is no prescribed order in which those consents should be obtained. Given that these concerns related to issues controlled by SEPA under separate regulation, and having regard to the government cautioning planning authorities against the improper duplication of other consenting regimes, it was considered appropriate in this case that these matters of public concern be addressed in the first instance via a CAR licence application, in order to confirm the consentability of the development from a pollution control perspective before going on to determine the planning application with reference to those matters material to the application. It should be borne in mind that part of the driver for this application is to move operations away from the site at Ardmaddy North to a location which is more favourable from a SEPA pollution control point of view.

The applicants have concurred with this approach, and further to extensive public representation to the CAR licence application which followed, following review of the matter by Scottish Ministers at the end of 2012 a CAR licence was subsequently issued by SEPA. That consent permits maximum biomass to be held on the site and licences permissible quantities of chemical treatments for use at the site. Although third parties continue to express doubt as to the reliability of SEPA's conclusions in the matter, the granting of the CAR licence is a matter of record and its validity cannot be questioned as part of the adjudication of this planning application. SEPA has addressed the capacity of the receiving environment to absorb the cumulative impact of multiple fish farm sites and the associated consequences of designated habitats and species as part of its assessment of the CAR licence application and has undertaken an 'appropriate assessment' relative to the pollution consequences upon the nearby Firth of Lorn SAC.

Reference is made to the apparent conflict between the additional pollution associated with this proposal and the costly waste water improvements implemented at Seil. These were borne out of European obligations upon Scottish Water and were driven by problems related to bacterial levels affecting shellfish waters, not by nitrogen or phosphorous enrichment. Human waste and fish farm waste are not therefore directly comparable in terms of their effects on the marine environment.

The disposal of fish mortalities on a routine basis or in the event of mass mortalities is not subject to planning control. This is an operational matter for the applicants and is regulated by SEPA (as waste) and by the Council's animal welfare officers (animal by-products). Typically, small scale mortalities are dealt with by way of incineration locally with larger quantities being disposed of by specialised contractors at sites licenced to handle this category of waste.

The track record of the applicants in the operation of other sites is not a material planning consideration. Infringement of the terms and conditions of site licences is a matter for SEPA to enforce as necessary.

Objections in respect of marine and nature conservation interests

- The site will give rise to adverse consequences for wild salmonids, common and grey seals and cetaceans and would therefore be contrary to the interests of biodiversity;
- The site is located too close to the Firth of Lorn Special Area for Conservation and the seal haul out in Cuan Sound;
- Disrespect for the marine environment to the detriment of marine life and its habitat shows a lack of human compassion;
- The use of Acoustic Deterrent Devices to scare predators away will also affect

cetaceans, such as the porpoises which are often seen in the Sound. These are protected by legislation and distress and adverse effects upon their hearing cannot be ruled out. The use of locally triggered devices over short periods could still pose a problem in that regard;

- Failure by the applicants to employ double netting presents prospect of wildlife entanglement, presents greater risk of escapes to the detriment of wild fish and leads to the unnecessary use of seal scarers and avoidable seal shooting. Development which poses a threat to seals and their pups ought to be rejected;
- The Seal Protection Action Group opposes the shooting of seals and believes that non-lethal predator strategies should be adopted;
- The Salmon & Trout Association objects on the basis that the development is likely to have an adverse impact upon migratory salmon and on sea trout as a result of sea lice propagation and escapes of farmed fish. No expansion of production should be allowed unless closed containment units are employed;
- As an ex local fisherman I have experienced the negative impact of fish farm development on the environment over the last twenty years and development of this type should be located further off shore;
- The developer should be required to underwrite independent monitoring of affected ecosystems;
- There is evidence of chemical treatments at fish farms proving harmful to shellfish populations.

Comment: The consequences of the presence and operation of the site upon marine habitats and species are clearly important issues for third parties, arising in part from the pollution consequences of development, but also from other matters such as sea lice propagation from farmed to wild fish, risk of escapes, deployment of acoustic deterrent devices and the prospect of seal shooting. Neither Scottish Natural Heritage, Marine Scotland nor the District Salmon Fishery Board have raised objections to the proposal on nature conservation grounds. The Habitats Regulations 'appropriate assessment' found at Appendix B has concluded that the proposal will not affect the integrity of the nearby Firth of Lorn Special Area of Conservation, which supports the conclusion reached by SEPA in their assessment of the preceding CAR licence application.

The consequences of the development for cetaceans and seals is clearly an emotive issue. The applicant's experience is that the tensioned netting system proposed at this site will provide adequate containment and protection against predators; a position which is accepted by SNH. It reflects current industry practice across Scotland and the applicant's practice at other sites in Argyll including sites in proximity to seal haul outs. The applicants do not routinely use acoustic deterrent devices (ADD's) and currently have none deployed on their sites across Argyll. Only one of their sites has been fitted with ADD's in recent years and that was for a temporary period as part of a university research project. However, in order to secure 'Freedom Foods' accreditation the ability to deploy ADD's as an option is required as it is necessary to demonstrate that in the event of persistent attacks by a rogue seal, all non-lethal methods have been employed in preference to recourse to seal shooting. SNH have requested a condition requiring details to be approved of the type and means of deployment of ADD's should they become required at some point in the future. In terms of seal shooting, this is licenced by Marine Scotland and is not a material planning consideration. Annual returns to the

Scottish Government indicate that in 2012 one seal was shot at the applicant's existing site at Ardmaddy. No seals have been shot at that location this year to date.

In terms of wild fish, the site is not close to important salmon rivers, although will be subject to the presence of salmon in the migration season and sea trout on a year round basis. The view of Marine Scotland is that provided the applicants adhere to the Scottish Salmon Producer's Organisation 'Code of Good Practice' (it is a requirement to demonstrate compliance to maintain membership) and treatment is available in sufficient quantities to control sea lice to CoGP standards, then the interests of wild fish should be adequately protected. Given that a CAR licence has already been granted it is already known that sufficient licenced treatments are available to the applicants at this site. The applicants propose to use a combination of in-feed treatments and well-boat treatments. The latter are to be employed in preference to net shallowing and in situ treatment, and this will improve efficacy and reduce the quantities of pollutants released into the marine environment.

Objections in relation to landscape, visual and amenity considerations

- The height of the net structure above the cages and the installation of a concrete feed barge give the development an industrial appearance;
- This development is proposed in a sensitive area of natural beauty where the barge, underwater lighting and the extent of the mooring area will impair views. It would be a dereliction of duty to sacrifice natural beauty to commercial interests;
- The south east coast of Seil Sound is unspoiled and identified by SNH as Craggy Coastline. There is a long established walking route from Ardmaddy to Loch Melfort which affords magnificent views. Development of this nature, which would not be countenanced on land, would be an act of environmental vandalism;
- Lighting will be intrusive given the absence of light sources in the area and the fact that indirect glow will affect a much wider area dependant on atmospheric conditions, even if the direct effects of light are localised or not significant at sea level;
- Noise from the feed barge generator would be intrusive in an area of low ambient noise, particularly as it would operate at night as well as during the day. Low frequency noise would be propagated long distances across open water. Generator noise from the site at NW Shuna can be heard at Toberonochy 3 miles distant on a calm night;
- The development will contribute to flotsam which is washed up on local beaches;
- The occupier of Kilbrandon House, Seil demands a report on the sound and visual impact on the property.

Comments: Given the location of the site within a designated Area of Panoramic Quality which accords the value of the landscape/seascape regional status, it is necessary to give consideration as to the visual and landscape effects of the development relative to the site to be removed from within the same designation, and the prospect of a mussel farm being located within the application site in accordance with the Crown Estate lease already held for such. This is addressed in Section C of Appendix A below. Site lighting is confined to one navigation light on the proposed feed barge plus underwater lighting for maturation purposes. The latter would not be visible at a distance nor at close quarters from sea level, as such underwater lighting is generally only visible from

elevated vantage points. Given the absence of transport routes or occupied buildings along the adjacent coastline it will not present an issue at this site, as locations overlooking the site will not be frequented during the hours of darkness. The feed barge proposed is a type in use by the applicants at other locations in Argyll. The modern type of generator employed is contained within the concrete structure of the barge and from experience at those locations is not audible other than at close quarters. Notwithstanding the low background ambient noise levels which would be a feature of still nights, the distance to sensitive receptors is such that noise nuisance would not produce amenity issues of significance associated with the operation of this site. Kilbrandon House is approximately 2km distant from the application site, which would move approximately 0.9km further away from that property than the existing site.

Objections in relation to recreation and tourism interests

- The development will adversely affect local tourism related employment which is founded upon wildlife and the environmental and scenic qualities of the area. By comparison fish farm related employment is negligible;
- Scotland's landscapes are already being devalued by wind turbines, power lines, inappropriate forms of rural development, shellfish and fin fish farms so a lot more common sense is required before such developments are allowed to go ahead;
- This is an area of scenic beauty and an iconic passage for vessels transiting from south to north. The presence of the fish farm will degrade the area as a location for recreational sailing;
- The development will damage an important sheltered dive site and wildlife tourism;
- The proposal will restrict access to the beach at Port na Morachd used for picnics and boat trips;
- The area will lose its unspoilt qualities and its attraction for kayaking and swimming;
- The Scottish Canoe Association objects on the grounds that the development will impede navigation and contribute to pollution to the detriment of the recreational resource and the tourism potential of this scenic location.

Comment: It is for Members to weigh the balance between the economic and employment advantages of the development against any adverse consequence which the presence of the development might have for established tourism related employment. Although the development will have localised impacts, these would be offset in part by the loss of existing adverse effects as a consequence of the removal of the existing site. There is no definitive research which leads to the conclusion that the presence of fish farms in Scottish waters has thus far proven to be an acknowledged deterrent to tourism, although given the importance of scenery as a tourism resource in Argyll & Bute it is to be expected that inappropriately located sites may deter visits by persons sensitive to the presence of such activities. SNH have not objected on the grounds that the development would be prejudicial to the landscape and associated recreational qualities of the area.

Objections in respect of navigation interests

- The development poses an unwelcome impediment to navigation given that Seil

Sound is already a difficult passage constrained by numerous hazards and a strong tide.

- Sailing to windward through the channel is challenging and the site will make this impossible in some circumstances other than under power. Not all boats have engines and to use them unnecessarily is wasteful.
- An unmarked rock at the entrance to the sound causes yachts to give it a wide berth.
- The buoyed area will be so large that it will effectively halve the width of the entrance to the Sound making navigation difficult for the less experienced.

Comment: Issues relating to navigation would be considered by Marine Scotland as part of the Marine Licence required for the deployment of equipment in the water. As this is a separate regulatory regime, technical matters relating to navigation are not material planning considerations as such, although to the extent that they might have consequences for the tourism and recreational potential of the area they have an indirect bearing on the acceptability of the development. Whilst the seabed area of the application site is extensive (in order to contain the limits of the mooring arrangements) the surface equipment and the buoys around that equipment present much less of an obstruction to navigation, particularly as the Northern Lighthouse Board do not require the outer anchor points to be marked by buoys. There is a requirement for workboats and larger well-boats to be able to access the site for servicing purposes. Although there is some narrowing of the sound as a result of the equipment, the width of the channel is still at least 420 metres at its narrowest point. It should be borne in mind that any north-south transiting boat traffic would have to negotiate the much narrower Cuan Sound between Seil and the Isle of Luing.

Objections in relation to the principle of marine salmon farming

- The farming of fish in cages is a form of 'battery farming' which is environmentally irresponsible and unethical in terms of animal welfare, and which devalues the scenic landscapes within which it is situated;
- Fish farms pose highly destructive effects upon both their immediate and wider environments;
- They are not a solution to over-fishing as small fish are taken to produce food for farmed fish and the fish produced are not fit for human consumption due to contamination with chemicals;
- Underwater organisms are part of a finely balanced ecosystem which are fatally threatened by pollution associated with fish farming;
- There is an urgent need for world-wide standards to control fish farm escapes in the interests of maintaining wild fish stocks;
- The economic benefits of fish farming are overstated, particularly given the largely foreign ownership of companies (in this case Polish). Shameless profiteering should not be allowed to go ahead against the interests of the environment.

Comment: Consideration of the merits of this application requires to be confined to the site specific circumstances of the case. Whilst there are those who regard marine fish farming as being an unsustainable and environmentally harmful form of development as

a matter of principle, it is a legitimate form of development supported by the Scottish Government who have targets for the development of the industry as a growth sector in the national economy and as valued source of employment within economically deprived rural areas of the country.

Suggested matters to be addressed by conditions in the event permission is granted

- Should permission be given, conditions should be imposed to require double netting, no use of seal scarers, no shooting of seals, no increase in biomass, low visibility equipment, a requirement to keep the site 'clean', and controls over lighting.

Comment: Whilst control over deployment of ADD's, appearance of equipment and lighting are capable of being controlled by way of planning condition, matters controlled by other bodies such as biomass (SEPA) and seal shooting (Scottish Government) are not matters which could be the subject of competent planning conditions.

NOTE: Committee Members, the applicant, agent and any other interested party should note that the consultation responses and letters of representation referred to in this report, have been summarised and that the full consultation response or letter of representations are available on request. It should also be noted that the associated drawings, application forms, consultations, other correspondence and all letters of representations are available for viewing on the Council web site at www.argyll-bute.gov.uk

(G) SUPPORTING INFORMATION

- | | |
|--|---|
| (i) Environmental Statement: | No – the development has been the subject of a negative EIA screening opinion having regard to the views of consultees and the presence of the existing farm which is to be removed in the event that this development proceeds |
| (ii) An appropriate assessment under the Conservation (Natural Habitats) Regulations 1994: | Yes – this form Appendix B to this report. |
| (iii) A design or design/access statement: | No |
| (iv) A report on the impact of the proposed development eg. Retail impact, transport impact, noise impact, flood risk, drainage impact etc: | Yes – Site and Hydrographic Report, and Chemotherpeutant Modelling for bath and in-feed treatments. |

(H) PLANNING OBLIGATIONS

Is a Section 75 agreement required: No

(I) Has a Direction been issued by Scottish Ministers in terms of Regulation 30, 31 or 32: No

(J) Section 25 of the Act; Development Plan and any other material considerations over and above those listed above which have been taken into account in the assessment of the application

(i) List of all Development Plan Policy considerations taken into account in assessment of the application.

'Argyll and Bute Structure Plan' 2002

STRAT DC 5 – Development in Sensitive Countryside

STRAT DC 7 – Nature Conservation and Development Control

STRAT DC 8 – Landscape and Development Control

'Argyll and Bute Local Plan' 2009

LP ENV 1 – Impact on the General Environment

LP ENV 2 – Impact on Biodiversity

LP ENV 6 – Impact on Habitats and Species

LP ENV 10 – Impact on Areas of Panoramic Quality (APQs)

LP ENV 12 – Water Quality and Environment

LP ENV 19 – Development setting, layout and design

LP CST 2 – Coastal Development on the Undeveloped Coast

LP AQUA 1 – Shell Fish and Fin Fish Farming

Expresses general support for fish farming subject to there being no significant adverse effect on a range of specified considerations; those relevant in this instance being:

1. Communities, settlements and their settings;
2. Landscape character, scenic quality and visual amenity;
4. National Scenic Areas and Areas of Panoramic Quality;
5. Statutorily protected nature conservation sites, habitats or species, including priority species and important seabird colonies along with wild fish populations;
6. Navigational interests
8. Sites of historic or archaeological interest and their settings
9. Recreational interests
11. Existing aquaculture sites
12. Water quality

In the case of marine fish farming this support is further conditional on the proposals

being consistent with the other policies of the Development Plan and Scottish Executive Strategic Framework Guidelines.

-
- (K) **Is the proposal a Schedule 2 Development not requiring an Environmental Impact Assessment:** Yes

-
- (L) **Has the application been the subject of statutory pre-application consultation (PAC):** No

-
- (M) **Has a sustainability check list been submitted:** No

-
- (N) **Does the Council have an interest in the site:** No

-
- (O) **Requirement for a hearing (PAN41 or other):** Yes - it is recommended that a pre-determination hearing be convened in response to the number of representations received from third parties and the complexity of the issues raised.

-
- (P) **Assessment and summary of determining issues and material considerations**

The proposal seeks permission for the installation of a marine finfish development of 12 No. 100m circumference (32m diameter) cages and a feed/service barge to be utilised for the production of farmed salmon.

The application site is located to the eastern side of Seil Sound close inshore to the coast of the Degrish peninsula which also forms the north coast of Loch Melfort. It is situated to the east of the small island of Torsa which lies to the east of Cuan Sound off the north-east coast of the Isle of Luing.

The site lies off an area of remote, largely inaccessible and uninhabited land, where it would be most readily experienced from boat traffic negotiating the Sound, or at a distance from coastal properties south of Balvicar on the Isle of Seil. The site currently benefits from a Crown Estate shellfish lease for mussel rafts, although it is not equipped for production. The nearest fin fish site is operated by the applicants some 900m to the north at Ardmaddy. This comprises a block of steel cages which it is proposed to remove should this enlarged and more modern facility be consented. The proposal therefore constitutes a relocation which also involves an increase in licenced peak biomass from 1,300 to 2,500 tonnes. There are no other finfish farms in Seil Sound, the nearest sites being well removed within Loch Melfort and around the coast of Shuna to the south.

The proposal when submitted in 2011 prompted significant public objection in relation to the anticipated pollution effects of the development and the associated consequences for marine habitats and species. Pollution control in respect of marine fish farm developments is exercised by the Scottish Environment Protection Agency (SEPA) through the Controlled Activities Regulations (CAR licence) rather than by the Council. Planning Authorities are cautioned in government advice against attempting to duplicate other regulatory regimes, so other than pollution consequences for wild fish (which are not subject to SEPA control), the remaining pollution effects of this development are not material considerations for the planning application process. Likewise it is SEPA who consent permitted biomass to be held at the site and not the Council. With this situation in mind, the applicants agreed to the suggestion from officers that in this particular case it would be appropriate for this planning application to be held in abeyance pending the submission and determination of a CAR licence application by SEPA, so that issues surrounding pollution could be addressed in the first instance, without leading to inappropriate demand from third parties for these to be addressed as part of the determination of this planning application.

In the event, a CAR licence application was pursued, and despite third party opposition prompting consideration of the matter by Scottish Ministers, no intervention on their part took place and SEPA proceeded to issue a CAR licence in respect of this 2,500 tonne site towards the end of 2012. Subsequent to that, the determination of the planning application is now being pursued.

The site lies outwith but adjacent to the Firth of Lorn Special Area of Conservation (SAC), the closest point of which lies at Cuan Sound which is 1.8km away. Where a development proposal is not connected with the management of a Natura site for nature conservation, is likely to have a significant effect on the site (either alone or in combination with other plans or projects), or effects are unknown, then the 'competent authority' assessing the merits of a development proposal (in this case the Planning Authority) is required to carry out an 'appropriate assessment' in order to evaluate anticipated effects on the conservation objectives of the designated site. This applies equally to developments located outwith designations which have the potential to impact upon qualifying interests within the designations, as it does to those developments proposed within designated areas. In such circumstances, only when it is concluded 'beyond reasonable scientific doubt' that the development under consideration will not adversely affect the integrity of the designation, may permission be granted. In all other circumstances permission must be refused (other than in the specifically excepted cases where no alternatives exist, or there are imperative reasons of overriding public interest for development to proceed).

SEPA as 'competent authority' in respect of the CAR licence process conducted their own 'appropriate assessment' prior to the granting of the licence for this site, which concluded that the proposal would not compromise the nearby SAC designation. Although SEPA's assessment is a matter of record, as the planning process commenced prior to SEPA's consideration of the matter, it remains incumbent upon the Planning Authority to conduct its own 'appropriate assessment' as part of the planning application determination process. This can be found at Appendix B to this report. It draws on SEPA's conclusions (which are annexed to the appendix) as well as advice provided by Scottish Natural Heritage. This concludes that impacts from solids flux, sea lice treatments and nutrients are calculable, and having regard to modelling results and accepted environmental standards, the development proposed will not adversely affect the integrity of the SAC in light of its conservation objectives.

Neither SNH, SEPA, Marine Scotland, nor the District Salmon Fishery Board have raised objections to the proposal. Objections have however been lodged by the Clyde Fishermen's Association, the Scottish Wildlife Trust, and adjacent Community Council's

Scottish Planning Policy indicates the national importance of aquaculture in the context of rural areas and that fish farming should be supported in appropriate locations, subject to environmental considerations being assessed. Carrying capacity, landscape, natural environment, historic environment and potential for conflict with other marine users, including fishing and recreational interests, and economic factors will be material considerations in assessing acceptability. Planning Authorities are cautioned not to duplicate controls exercised by SEPA and Marine Scotland in their assessment of proposals.

Government policy is to support the expansion of marine fish farming where it can take place in environmental sustainable locations, where it does not exceed the carrying capacity of the water body within which it is to be located and where it does not give rise to significant adverse effects upon nature conservation, wild fish, historic environment or other commercial or recreational water users. The intention of this proposal is to enable the replacement of a first generation fish farm with more modern equipment in a more hydrographically favourable location, whilst also taking the opportunity to expand capacity. Despite the increase in biomass, the surface area of the cages would reduce marginally, although the less compact layout of circular rather than square cages would lead to an overall increase in the extent of surface footprint.

It has already been demonstrated to SEPA's satisfaction that the development can operate without compromising recognised water quality standards and that discharges from the site will not affect the integrity of nearby European protected habitats. The location of the site between the largely unpopulated coasts of Degrish and Torsa are such that it will not exert influence over the land to any degree beyond that already associated with the nearby site which it is intended to replace. Both sites lie within the same local plan designated Area of Panoramic Quality. Sensitive receptors on land on the Seil coast to the north would benefit from the intended relocation of the site southwards at increased separation. The site would however be relocated to a narrower section of the Sound, which would bring those navigating the Sound closer to the equipment. However the proposal would reduce the number of consented aquaculture sites from one shellfish and one finfish site to the single site proposed, so any increased visual impact would be offset by this reduction in the number of sites. Whilst the width of the navigational channel will be reduced, at 420m this would not be to the extent that it would frustrate navigation. This aspect would be addressed separately by the Marine Licence process.

Significant representation against the proposal has been received, primarily on grounds

that the development would increase pollution and pose a threat to protected habitats and species. The extent and complexity of the issues raised are such as to warrant a local hearing prior to the determination of the application.

(Q) Is the proposal consistent with the Development Plan: Yes

(R) Reasons why Planning Permission or Planning Permission in Principle Should be Granted:

The proposal involves the establishment of a new marine finfish farm, which would entail the de-equipping of an established farm to the north of the site and the relinquishment of the lease, and which would supersede an undeveloped but consented shellfish farm within the application site. It would maintain the number of finfish farms in Seil Sound at a single site. Whilst the development would occupy a narrower section of the Sound and would occupy a larger overall footprint, other than for the addition of a feed barge, the aggregate surface equipment area would remain similar to that at the existing site. The landscape and visual consequences of the development relative to the existing position are considered acceptable, whilst the separation from sensitive receptors avoids unacceptable amenity conflicts. Navigation of the Sound will remain unimpeded and recreational interests will not be seriously prejudiced. The pollution consequences of the development in combination with other fish farm developments upon the protected habitats of the Firth of Lorn SAC have been assessed by means of 'appropriate assessment' and it has been determined that this proposal will not adversely affect the integrity of this European marine designation. The proposal satisfies the provisions of the development plan and there are no other material considerations, including matters raised by consultees and third parties, which would outweigh the presumption in favour of development established by the plan.

(S) Reasoned justification for a departure to the provisions of the Development Plan

Not applicable

(T) Need for notification to Scottish Ministers or Historic Scotland: No

Author of Report: Richard Kerr

Date: 29th February 2013

Angus Gilmour
Head of Planning and Regulatory Services

CONDITIONS AND REASONS RELATIVE TO APPLICATION 12/00904//MFF

1. The development hereby permitted shall not be carried out other than wholly in accordance with the following plans and details unless previously approved in writing by the Planning Authority:

- Application Form dated 13.06.11;
- Plan 1 of 9 – current and proposed site locations and layout;
- Plan 2 of 9 – location plan 1:10,000;
- Plan 3 of 9 – location plan 1:25,000;
- Plan 4 of 9 – Admiralty chart indicating mooring containment area;
- Plan 5 of 9 – site layout plan;
- Plan 6 of 9 – cage sections;
- Plan 7 of 9 – net specifications;
- Plan 8 of 9 – feed barge specifications (amended 18.12.12);
- Plan 9 of 9 – feed barge appearance (amended 18.12.12).

Reason: For the purpose of clarity, to ensure that the development is implemented in accordance with the approved details.

2. The stocking of the farm hereby approved with fish shall not take place until the fish pens walkways, associated structures and moorings have been removed from the existing site at Ardmaddy North (0.9km north of the consented site) and evidence has been presented to the Planning Authority that the existing Crown Estate lease has been relinquished in order to prevent subsequent re-equipping of that site.

Reason: Consent for this development is granted solely on the basis that this development will replace the existing operation. Occupation of this site in association with the existing site would produce unacceptable cumulative impacts as a result of the presence and operation of multiple sites in inappropriately close proximity which would exceed the carrying capacity of the receiving environment.

3. In the event that the development or any associated equipment approved by this permission ceases to be in operational use for a period exceeding three years, the equipment shall be wholly removed from the site thereafter unless otherwise agreed in writing by the Planning Authority.

Reason: In the interest of visual amenity and to ensure that redundant development does not sterilise capacity for future development within the same water body.

4. In the event of equipment falling into disrepair or becoming damaged, adrift, stranded, abandoned or sunk in such a manner as to cause an obstruction or danger to navigation, the developer shall carry out or make suitable arrangements for the carrying out of all measures necessary for lighting, buoying, raising, repairing, moving or destroying, as appropriate, the whole or any part of the equipment.

Reason: In the interest of visual amenity.

5. All lighting above the water surface and not required for safe navigation purposes should be directed downwards by shielding and be extinguished when not required for the purpose for which it is installed on the site.

Reason: In the interest of visual amenity.

6. The finished surfaces of all equipment above the water surface including the feed barge and surface floats and buoys associated with the development hereby permitted (excluding those required to comply with navigational requirements) shall be non-reflective and finished in a dark recessive colour in accordance with colour schemes to be agreed in advance in writing by the Planning Authority (by way of BS numbers or manufacturer's specifications) unless otherwise agreed in advance in writing by the Planning Authority.

Reason: In the interest of visual amenity.

7. No deployment of Acoustic Deterrent Devices shall be permitted at the site unless the model intended for use and the means of its use have been submitted to and approved in writing by the Planning Authority, following consultation with Scottish Natural Heritage. Thereafter deployment shall only take place in accordance with the duly approved details unless any subsequent variation thereof is agreed in writing by the Planning Authority.

Reason: In the interests of nature conservation.

NOTES TO APPLICANT

- This permission shall only last for a period of **three years** from the date of this decision notice unless the development is started within that period.
- In order to comply with Sections 27A(1) of the Town and Country Planning (Scotland) Act 1997, prior to works commencing on site it is the responsibility of the developer to complete and submit the attached 'Notice of Initiation of Development' to the Planning Authority specifying the date on which the development will start. Failure to comply with this requirement constitutes a breach of planning control under Section 123(1) of the Act.
- In order to comply with Section 27B(1) of the Town and Country Planning (Scotland) Act 1997 it is the responsibility of the developer to submit the attached 'Notice of Completion' to the Planning Authority.
- In terms of condition 1 above, the council can approve minor variations to the approved plans in terms of Section 64 of the Town and Country Planning (Scotland) Act 1997 although no variations should be undertaken without obtaining the prior written approval of the Planning Authority. If you wish to seek any minor variation of the application, an application for a non material amendment (NMA) should be made in writing to Planning Services, Whitegates Office, Whitegates Road Lochgilphead, PA31 8SY which should list all the proposed changes, enclosing a copy of a plan(s) detailing these changes together with a copy of the original approved plans. Any amendments deemed by the Council to be material, would require the submission of a further application for planning permission.
- The applicant should have regard to the navigational marking requirements of the Northern Lighthouse Board as set out in their consultation response.
- The deployment of Acoustic Deterrent Devices at this site may be subject to a requirement for a licence to be obtained in advance from Scottish Natural Heritage in respect of disturbance to cetaceans, in addition to the requirements of condition 7

above. Early consultation with SNH over the matter of the prospective deployment of ADD's is recommended.

APPENDIX A – RELATIVE TO APPLICATION NUMBER: 09/00905/MFF

PLANNING LAND USE AND POLICY ASSESSMENT

A. Location, Nature and Design of Proposed Development

The applicant in this case is Lakeland Marine Farms Ltd (part of the Meridian Group) who currently operate a number of finfish farming sites across Argyll including an existing site at Ardmaddy (referred to as Ardmaddy North for the purposes of this application). That site is a first generation farm comprising 18 No. 10m deep 24m x 24m square metal cages, projecting 1.4m above the surface, with bird exclusion nets and several sheds mounted on the walkway structures, but without a feed barge. It provides an aggregate cage surface area of 10,368m² within an overall occupied surface area of 13,440m², secured within a seabed mooring area of 145,000m². It has a licenced maximum biomass of 1,300 tonnes. The applicants seek to replace that equipment whilst at the same time expanding the productive capacity of the farm, and in so doing have identified a hydrographically more favourable site 900m to the south, which would lend itself to the increased biomass proposed.

The proposed site (referred to as Ardmaddy South for the purposes of this application) lies on the same side of the Sound some 900m to the south of the location of the current equipment. The site is located off the west coast of the Deignish peninsula at Port na Morachd, about 1km to the north of Deignish Point and on the opposite side of the Sound to the small island of Torsa. The proposal is to equip the site with 12 No. 100m circumference circular cages grouped together in a 6 x 2 rectangular mooring grid, producing a slightly reduced aggregate area occupied by surface equipment that at Ardmaddy North at 9,549m², within a larger 179,800m² mooring area (580m x 310m). The cages would be fitted with a centrally supported top net structure giving an overall maximum height of 2.6m at the cage centre point. The site would have a maximum biomass of 2,500 tonnes - 1,200 tonnes greater than the existing site at Ardmaddy North. The main difference in the appearance of the site will be accounted for by its less compact format due to the bigger gaps between circular cages, and the addition of a feed barge at the north end of the cage group. It will therefore occupy a larger area of water (cage grid within a buoyed support structure of 100m x 300m), despite the fact that the surface area of the equipment within this overall area will be less than that of the pens at the present site.

The application site already benefits from a Crown Estate lease for a shellfish farm comprising 6 No. 10m² mussel rafts within a 55,000m² mooring area, although the site is not currently equipped for production. It is intended that the proposal will supersede the shellfish site and that the lease for the Ardmaddy North site would be relinquished and the equipment removed, in the event that this larger replacement farm at Ardmaddy South is consented.

The proposed cages comprise circular polyethylene flotation rings approx. 1.2m high above the waterline with a diameter of 32m, from which 15m deep nets will be suspended. The cages will be fitted with a 'hamster wheel' top net support 2.6m high which will enable the fitting of 25mm mesh nets over the cages for the purpose of excluding piscivorous birds. The nets are fitted with false bottoms (seal blinds) to deter predator attacks from below, and are held in tension, again to resist predation. The cages will be secured in place by a rectangular 100m x 300m mooring grid with mooring lines and rock anchors used to secure the position of the grid relative to the seabed. The site will be aligned SW - NE parallel to, and close inshore to, the mainland

coast. The feed barge originally proposed was 18m x 26m in area although this has since been reduced by way of amended plans showing a much smaller barge 14.0m x 10.5m in area and 5.3m in height maximum, dependent upon the quantity of feed held. The barge comprises four silos, a generator, maintenance and crew accommodation. It will be finished in a recessive colour with generator noise only audible at close quarters. The site will be staffed by 3 to 4 full-time employees plus 2 part-time staff and will safeguard the jobs currently associated with Ardmaddy North. Deliveries to the site will be by sea from Lakeland's existing shore base at Loch Craignish. Personnel transfers will take place by boat from a staff facility at Croabh Haven. Underwater lighting would be used to control maturation and maximise growth December to May every second year with 2 No, 1,000w lights being used 5m beneath each cage. These would be powered by the feed barge generator and would produce a surface glow only visible at close quarters or from elevated vantage points. Other lighting on the site, with the exception of navigational requirements, would be restricted to essential requirements so as to avoid unnecessary illumination on the site.

The section of the Sound to which the site is to be relocated is narrower than that occupied by the equipment at Ardmaddy north being some 700m wide at this point and narrowing off to the south due to the presence of the island of Torsa. The nearest fish farm site is that at Ardmaddy North (to be relinquished) with the next nearest sites either being within Loch Melfort or off the north coast of the island of Shuna, some 5km to the south. Seil Sound is 'unclassified water' for the purpose of Marine Scotland's Locational Guidelines for fish farms in marine waters, as it is a complex open water body which does not suit the modelling used to inform the guidelines (which relate more to sealochs which are most susceptible to cumulative impacts). In view of this the applicant has undertaken nutrient enrichment modelling which has been accepted by Marine Scotland and by SEPA in their 'appropriate assessment, which in turn informs the conclusions of the Councils own assessment.

The site lies within Management Area 16d (Seil Sound to Loch Craignish). There is no Area Management Agreement in place for this location at the moment due to the decision of wild fish interests to withdraw from the former Lower Lorn AMA. The applicants are, however, part of the Lower Lorn Farm Management Agreement with Kames Fish Farm which ensures synchronous stocking and treatments between the two companies actively farming in this area. The intended peak biomass (fish tonnage) for the overall site is 2,500 tonnes. The stocking density would be 17.4kg per m³ max. The production cycle of the farm would be 22 months with 2 months left fallow to assist in benthic (sea bed) recovery.

The site would be operated in compliance with the Scottish Salmon Producers Organisation's '*Code of Good Practice Guidelines for Scottish Finfish Aquaculture*'. This sets out more than 300 main specific compliance points which cover all aspects of finfish good practice including:

- Fish Health – good husbandry and harvesting operations;
- Protecting the environment – including sea lice management and containment standards;
- Welfare and husbandry – breeding and stocking density;
- Detailed annexes giving further technical guidance on good practice, including the National Lice Treatment Strategy, Integrated Sea Lice Management, Containment, and a Veterinary Health Plan.

The applicants have provided details of their Emergency Mortality Removal and Escapes Contingency procedures, manufacturers' site specific attestations for equipment, nets and moorings, their Veterinary Health and Biosecurity Plan and their Predator Risk Assessment and Predator Control Plan. With regard to predator control,

it is noted that the ES states that Acoustic Deterrent Devices (ADDs) would only be deployed in circumstances where the site becomes subject to attempted predation. As a last resort in the event of persistent rogue seal activity, the shooting of seals may take place in accordance with a Scottish Government licence already held by the company.

B. Natural Environment - Fresh Water, Marine Environment and Biodiversity.

The provisions of Policies STRAT DC 7, LP ENV 2 and LP ENV 6 all seek to resist development which is considered likely to result in a significant adverse impact upon internationally, nationally or locally important habitats and/or species.

The application site is not located within any European or national nature conservation designations. Whilst the proposal lies outwith the Firth of Lorn Special Area of Conservation (SAC) it is within potential influencing distance of the SAC, the nearest point of which is some 2km away at Cuan Sound, and for that reason a Habitats Regulations 'appropriate assessment' has been carried out in respect of qualifying interests of this European marine site. The Sound is also frequented by species of nature conservation interest including seals and wild salmonids, for which development of the type proposed could have consequences in terms of displacement or deterrence. Salmon and Sea Trout are vulnerable to interaction with farmed fish and both a UK BAP and the A&B LBAP species and included in the Argyll & Bute Local Biodiversity Action Plan. The Sound also hosts white cluster anemone, which is a Priority Marine Feature.

Seabed (Benthic) Impacts:

The development will affect seabed conditions as a consequence of the deposition of organic matter in the form of faeces. Furthermore, although the industry has made advances in the reduction of waste food as a result of more sophisticated feeding regimes, waste food also contributes to seabed deposition. This can take the form of localised smothering of the seabed as well as more distant deposition arising from the propagation of waste matter from the site. The quantity and the extent of deposition are influenced by the tonnage of fish held, hydrographic and bathymetric conditions. Seabed impacts are regulated separately by SEPA via the CAR licence process, which determines maximum biomass with regard to the carrying capacity of the particular site.

The applicants have provided a benthic survey, a visual assessment and a modelling assessment in support of their proposal, all of which have been considered by SEPA as part of their CAR licence application and which have helped inform SEPA's conclusions in respect of their 'appropriate assessment'. The seabed below the proposed site comprises firm mud, shell and gravel which supports a diverse range of mollusc, crustacean and echinoderm. There are no specifically designated habitats below or in the immediate vicinity of the site. Modelling has been used to predict a site specific Allowable Zone of Effect (AZE) in order to demonstrate compliance with SEPA's requirements. This indicates that there will be localised enrichment with high dispersal at what is regarded to be a moderately flushed site. SEPA has accepted this conclusion along with the fact that there will be low cumulative impact as the next nearest site is 2.5km distant. The CAR licence which was issued at the end of 2012 addresses the discharge consequences of the development in terms of smothering as well as chemical treatments and cumulative nutrient enrichment.

SNH and SEPA are both content with the benthic surveys undertaken by the applicant and neither have objections to the proposal on the grounds of unacceptable benthic impacts.

Water Quality Impacts:

Enrichment of water by nutrients released from salmon farms can cause an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms and the quality of water.

This site is located at the SE entrance to Seil Sound which is subject to tidal currents producing a moderately flushed site, and modelling indicates that waste dispersal will be into the deeper water of the Sound as well as to Loch Melfort and Shuna Sound. Estimated nutrient enrichment is well below the threshold of 50% above the OSPAR and UTAG reference levels, and consented sea lice treatments have been set in the CAR licence for the site at a level which will not breach SEPA's Environmental Quality Standards. Whilst localised impacts are anticipated from particulate and dissolved wastes, modelling results indicate that these, when considered cumulatively with other consented sites, will not result in a significant deterioration in the quality of the receiving water body; a position accepted by SEPA in the issuing of a CAR licence for the biomass sought by the applicants.

Neither Marine Scotland Science nor SEPA have raised objection to the proposal in respect of the predicted impact of the development upon water quality.

Interaction with Predators:

Salmon farm predators are generally piscivorous birds and seals, with the latter tending to be the most frequently encountered predators on marine farms in Scotland. The presence of sea cages may attract higher concentrations of predators to the locality of the site, although good husbandry and hygiene procedures will help to reduce the attraction of predators. Tensioned netting on fish cages prevents and deters both seals and diving bird attacks, although regular removal of mortalities from the bottom of the nets and regular maintenance of the nets to maintain their integrity is necessary to avoid attempts at predation. Top nets are to be installed on the cages to avoid predation by birds from above the waterline. Bird nets require to be maintained to a high standard and properly tensioned eliminate the opportunity for birds to become entangled or to be able to enter the cage. The fish cages themselves are to be manufactured to current industry standards, with a net specification, tensioning arrangements, false bottoms and an installation, inspection and maintenance regime to meet the SSPO '*Code of Good Practice*' requirements. It is clearly in the operator's interest to ensure that equipment is specified and maintained in a manner to ensure containment of the farmed fish. Site specific equipment attestations have been supplied to confirm that, in the respective manufacturer's opinions, the equipment intended for use on this site is suitable and sufficiently durable to be deployed having regard to the characteristics of in the particular marine environment proposed.

The ES does not identify any major colonies of predators in the vicinity of the application site, although there are recorded haul outs within 2km at Cuan Sound and Scoul Eilean. The Environmental Statement concludes that proposed use of good husbandry (mortality and moribund fish removal) and hygiene practices based on experience at other sites, coupled with the use of tensioned nets and top nets will be sufficient to deter predators at the proposed site. In the event of persistent predator activity, the applicants wish to maintain that option to deploy Acoustic Deterrent Devices (ADD's) to scare away seals in order to avoid resorting to the shooting of seals. Technology has improved in recent years with devices available which are more

effective than previous systems and are more localised and targeted in their impact. SNH have asked that deployment of ADD's be subject to their approval via planning condition. Only in extreme circumstances would resort be made to the shooting of seals under government licence. The applicants already hold a Seal Management Licence for their 9 sites on the west coast, including Ardmaddy North, to which they would request this proposed site by way of an addition in the event that planning permission is granted. During 2012 one seal was shot in connection with the applicant's farm at Ardmaddy North.

Scottish Natural Heritage has not raised objection to the proposal on the grounds of unacceptable consequences for potential predators or impacts on non-target wildlife.

Interaction with Wild Salmonids:

Farming of salmon in the marine environment can give rise to well-known consequences for wild fish as a result of disease transmission, sea lice propagation and escapes which can lead to competition and inter-breeding, with consequences for the genetic dilution of native wild stocks. The potential for escapes (as with predator control) can be reduced by having an equipment specification determined by site specific wave and climate analysis so as to ensure that it is fit for purpose. An associated inspection and maintenance regime is then required to ensure on-going containment integrity. Predator control plans, and escapes contingency plans, as submitted by the applicant, are also important elements in risk management.

Although containment risks can be managed, they cannot however be eradicated and there remains a residual risk that an unforeseen event can propagate escaped farmed fish in large numbers into the uncontrolled marine environment. Escapes of farmed stock are generally low, but can occur through equipment failure, predation, operator error, severe weather or foul play. By adherence to the SSPO '*Code of Good Practice Guidelines*' the applicant seeks to minimise this residual risk as far as is practicable. Likewise, via good husbandry practices, regular inspection and the administration of medicines in accordance with veterinary health plans, outbreaks of disease which could have consequences for wild fish can be managed.

The most intractable issue influencing the interaction between farmed salmon and wild fish species is that of sea lice transmission. Farmed fish are routinely hosts to parasitic sea lice, the numbers of which require to be controlled in order to assure the health of farmed fish and to avoid lice propagation into surrounding waters. Wild salmon can be exposed to sea lice from fish farms close to salmon rivers during their migration periods, whilst sea trout tend to remain in coastal waters throughout the year, so are potentially at greater risk. In this case there are no major wild salmon fisheries within 15km of the site.

The applicant proposes to control sea lice in accordance with current industry practice, via the use of in-feed treatments and well-boat administered bath treatments, whilst adopting good management practices such as single year stocking and synchronous stocking, fallowing and lice treatment with other sites within the Lower Lorn Farm Management Agreement. All sea lice bath treatments are intended to be carried out on board well-boats (rather than the more traditional method of net shallowing) which is a superior method, in terms of control over exposure time and dosage to ensure the effectiveness of those treatments. It also enables more than 50% reduction in the use of chemotherapeutants over treatment administered within cages. The applicants are also trialling the use of wrasse as a means of biological control over sea lice hosted on farmed salmon, which again presents opportunity to reduce the administration of chemical controls.

However effective the control measures are in practice, it is an inevitable consequence of holding fish in such quantities that significant numbers of sea lice will be propagated from the site. How these are dispersed will depend on local factors such as wind direction and residual current. The distribution of farm derived lice in the marine environment is not well understood although it is known that in favourable conditions they can travel considerable distances from source.

In addition to sea lice propagation, failure of containment can lead to escapes which pose a threat to wild fish due to competition or through breeding. The applicants consider that their tensioned net systems are appropriately specified so as to be fit for purpose at the site and that they are accompanied by appropriate management measures and predator control arrangements to minimise the prospect of escape events. None of the applicant's fish farm sites in Argyll have to date been the subject of mass escapes.

The conclusion of the applicant's supporting information is that the site will not prejudice wild fish interests. The applicants have stated that they have not had sea lice problems with the existing site at Ardmaddy North and sea lice treatment already consented by SEPA is suitable to allow efficacious treatment of lice populations at this enlarged site in accordance with recognised standards.

Neither Marine Scotland nor SNH have objected to the proposal on the grounds of the threat posed to wild salmonids. The District Salmon Fishery Board have not objected subject to removal of the existing site, but have expressed their preference for the site to operate on the basis of reduced biomass in order for effective treatment to be demonstrated. Given the capital investment in an enlarged facility such as this, a conditional obligation for under-stocking would not be a reasonable planning requirement.

Impact upon Species and Habitats of Nature Conservation Importance:

No species or habitats of nature conservation importance were identified by the applicant's submitted seabed survey within the predicted depositional footprint of the proposed farm. The presence of white cluster anemone (a Priority Marine Feature) 150m north of SPA's Allowable Zone of Effect (AZE) has been pointed out by the Scottish Wildlife Trust. This has been accounted for by SNH in their response to SEPA's CAR licence consultation, with the view being expressed that whilst localised changes to the structure of the colony may occur as a result of the operation of the farm, these are unlikely to affect the long-term viability of the species at this location or its overall conservation status in the context of north Argyll.

There are no nature conservation designated sites (SSSI's or SAC's) in the immediate vicinity of the proposed farm, although it does lie within a Marine Consultation Area defined by Scottish Natural Heritage in view of the overall quality of the marine environment. The closest designated site is the Firth of Lorn SAC to the west of Cuan Sound and the Isle of Luing identified for its rocky reef habitat. The SAC covers open water to the west of Seil and Luing and waters around Scarba and to the north of Jura, but excludes the more enclosed waters of Seil Sound, Shuna Sound and Loch Melfort. A map of the designated area appears in the 'appropriate assessment' at Appendix B.

Covering an area of approx. 210km² the Firth of Lorn SAC has been designated for its rocky reef habitats which support an exceptional marine biodiversity, with associated communities and species which are amongst the most diverse in both the UK and Europe. Conservation objectives for the SAC are to avoid deterioration in the qualifying interest (rocky reefs) thereby ensuring that the integrity of the designation is maintained. Although at a distance from the designated SAC, there may be potential

for the proposed development to affect the designated area by means of the deposition of organic waste and by chemotherapeutants transported into the designated area by tidal currents. The proposed fish farm has the potential to affect qualifying interests in a number of ways. Firstly, from smothering as a result of the transport and deposition of solids; secondly, due to toxicity from the exported residues of chemical treatments; and thirdly, from the cumulative impact of the development with other sites within influencing distance of the SAC.

Where a development has the potential to give rise to significant effects upon the qualifying interests of a European Natura designation, the 'competent authority' considering the merits of any development proposal within, or within influencing distance of, the designated area is required to undertake 'appropriate assessment', if it considers that it presents the possibility of significant environmental effects upon that designation. Where a likely significant effect is anticipated, development may only proceed if the 'appropriate assessment' concludes beyond 'reasonable scientific doubt' that the integrity of the SAC will not be compromised. In all other circumstances to satisfy the requirements of the Habitats Directive, permission must be refused (other than in the specifically excepted cases where no alternatives exist, or there are imperative reasons of overriding public interest for development to proceed).

Interaction between the site and the SAC designation in terms of the transport of organic waste and chemotherapeutants has been reviewed by SEPA by way of a Habitats regulations 'appropriate assessment' in association with their CAR licence process. An 'appropriate assessment' on behalf of the Planning Authority drawing heavily upon the conclusions reached by SEPA, can be found at Appendix B to this report. In reaching its own conclusions as set out in that appendix, the Council has consulted both with SEPA and SNH for their views on the matter. Dispersal modelling accepted by SEPA indicates that solids and in-feed chemical residues will be predominantly exported via Cuan Sound into a dispersive environment where additional amounts will not be such as to breach Environmental Quality Standards (EQS) set by SEPA, or to compromise the conservation objectives of the SAC.

The Planning Authority's 'appropriate assessment' has considered the likely environmental effects upon habitats and species associated with the SAC and has concluded that the proposal both in isolation, and in combination with other consented sites, will not have an adverse effect on the integrity of the site, in the light of its conservation objectives.

Scottish Natural Heritage has not raised objection to the planning application or the SEPA CAR licence on the grounds of unacceptable consequences for marine mammals, otters, the priority marine feature 'white cluster anemone' or the qualifying reef habitat of the SAC

Conclusion

The proposal is considered consistent with Local Plan Policy LP AQUA 1 (5 and 12) and other relevant development plan policies insofar as it would not significantly prejudice water quality and associated biodiversity interests.

C. Landscape/Seascape Character

The application site lies inshore in a relatively remote location off the west facing coast of the Degnish peninsula. From the land the site would be visible from the west facing slopes above the coast, but there is no road access to this area, no overlooking habitation and little public access appears taken to this area other than for the path

between Loch Melfort and Ardmaddy which is set well back from the coastline behind the high ground overlooking the site. The opposing coast is formed by the eastern side of the small island of Torsa. There is no habitation on the east facing coast of the island, and there are unlikely to be few sensitive receptors affected. The site would be visible, but at a distance in excess of 2km, from a handful of isolated properties to the north-west on the Isle of Seil, which can be found close to the coast and to the south of Balvicar. There will be some limited visibility from the land either side of the Cuan Ferry but remaining visibility from Luining would be from the largely unpopulated east coast, other than for long distance visibility, end on to the site, from Toberonochy at over 5km away. The existing site at Ardmaddy North lies closer to the closest properties south of Balvicar than the location of the proposed site, which lies at an increased distance from any habitation. Any disbenefit arising from the enlarged site, including the additional impact of a feed barge would be largely offset by the removal of the existing equipment closer to Seil. Both the existing fish farm at Ardmaddy North and the proposed site lie adjacent to areas designated as 'sensitive countryside' and 'Areas of Panoramic Quality' by the adopted local plan, so share the same development plan context.

The 'Area of Panoramic Quality' accords the locality a scenic designation of regional status. The provisions of Policies STRAT DC 8 and LP ENV 10 seek to resist development which is considered to have a significant adverse impact upon the key landscape characteristics of these designations. Both the mainland and the islands either side of Seil Sound are identified as falling within the '*Craggy Coast and Islands*' landscape character type, identified by Scottish Natural Heritage as having a small scale diverse topography within a distinct seascape context which provides a unifying element. The more inaccessible sections of coast exhibit a sense of isolation and naturalness which is less apparent on the more inhabited stretches of coast. The APQ recognises the panoramic value of the seascape and the views to and from the islands.

The intended location lies close inshore and parallel to the coast, where it would benefit from a dark coloured and elevated landscape backdrop, whilst the equipment is low-lying and to be finished in a recessive colour. This meets with SNH good practice guidance on the location and design of marine aquaculture development. Most terrestrial receptors (roads, transport routes, frequented public locations) would be at a significant distance from the equipment which would not assume importance in its landscape setting when appreciated from such locations. The lack of access being routinely taken to the isolated stretch of coast on the mainland immediately above the site is such that there will be few receptors taking closer quarter views down into the equipment.

The primary effect upon the perception of the landscape/seascape of Seil Sound will be in terms of those transiting the Sound by boat. Seil Sound is a body of enclosed water which is frequented by recreational boat traffic and a recognised cruising route. Yachts, tour boats and kayaks currently pass the existing site at Ardmaddy North, so their experience of the Sound is already influenced by the presence of aquaculture equipment. Although the proposed site is larger in extent and the Sound is narrower in the vicinity of the proposed site, there will be a small reduction in the aggregate surface area of the equipment and the round cages proposed are less visually intrusive than the existing square cages, which form a more compromising block with less intervening water. Whilst a feed barge is proposed, and this is an additional element not present at Ardmaddy North, the applicants have reduced the scale of that proposed significantly in order to limit the impact of this structure. Feed barges are now an almost standard requirement in the servicing of modern marine fish farm operations and it would be unrealistic to expect a site of this nature not to include one. Provided that the model selected is finished in a recessive colour it will not be an unacceptable element of the development.

The proposal would also remove the prospect of the existing shellfish lease being taken up for the siting of mussel rafts on the application site. The removal of the equipment from Ardmaddy North in favour of the proposed development would mean that there would still be one fish farm to be passed by boat traffic at the southern end of the Sound. Despite the revised location and the altered appearance of the equipment, there would be overall little change in the perception and the appreciation of landscape/seascape from the water, with aquaculture retaining a presence in the locality by way of a single finfish farm, well removed from the next closest aquaculture site, so that cumulative impact does not become unacceptable in landscape or visual terms.

Scottish Natural Heritage are of the opinion that the landscape and visual effects of the development will be localised. Whilst it has been suggested that the impact of the feed barge could be reduced by repositioning it to the southern end of the site, where it would benefit from screening by the higher part of the island of Torsa, the applicants do not consider this to be desirable operationally as their practice is to site barges on the less exposed ends of sites, where in the event of storm damage, the threat to the integrity of the cage group is less. The applicant's response has been to downsize the scale of the intended barge in its originally proposed location as an alternative means of addressing this suggestion.

Conclusion

The proposal complies with Local Plan Policy LP AQUA 1 (2 and 4) and other relevant development plan policies insofar as it would not significantly prejudice landscape character, visual amenity or designated areas of scenic quality. In view of the absence of other aquaculture in the immediate locality, and the intention to remove equipment from the existing site at Ardmaddy North in the event that permission is granted, the development does not present any cumulative impact issues of concern.

D. Other Marine Users

The development of the proposed site would entail the relinquishment of the existing Crown Estate lease for the fish farm site at Ardmaddy North. This would release new ground for inshore creel fishing once the seabed has had opportunity to recover from the presence of an operational farm. The Sound is not used for trawling. Although the Clyde Fishermen's Association has objected to the development their objections tend to be founded around the growth of the aquaculture sector in general and the perceived unsustainability of the industry rather than upon specific shortcomings associated with the location of the application site or the details of the proposal.

The proposed site is located in a narrower section of the Sound than the current site and the proposed mooring area extends further out into the Sound than the area which is the subject of the current Crown Estate shellfish lease area. Despite that, the equipment is to be located close inshore to the east of existing navigational and RYA cruising routes, which will ensure that the surface equipment and the associated moorings do not impinge upon access into and out of the south of the Sound by boat. Navigational implications of the development will be considered separately by Marine Scotland under the marine licencing procedure. It should be borne in mind that whilst the seabed foot print of the mooring area is extensive at 580m x 310m, around a third of the seaward end of the mooring lines will be on the seabed rising up to the cage mooring grid which is supported by riser buoys 8m out from the cages. Therefore navigation relatively close to the cage group is possible, and indeed the installation has been designed to afford sufficient draught for a large well boat to service the farm and for workboats to come alongside the cages.

Conclusion

The proposal complies with Local Plan Policy LP AQUA 1 (6 and 11) and other relevant development plan policies insofar as it would not significantly prejudice navigation and the continued exploitation of traditional fishing ground.

E. Noise

Noise associated with the development will arise from the operation of workboats and other vessels associated with the fish farm, plus noise from the generator within the concrete feed barge. Given the absence of local habitation or other sensitive receptors, and the transient nature of other boat traffic, this will not present a problem in terms of the operation of the site. The applicants already utilise the type of feed barge intended to be employed at this site and experience of that in operation is such that it is evident that generator noise will not pose a threat to amenity.

F. Transport

As with the existing site at Ardmaddy North, there will be no need for access to the locality of the site by road. Servicing and deliveries will be undertaken by boat from the applicant's existing shore base in Loch Craignish. Personnel will take access by small boat from an existing facility adjoining the marina at Craobh Haven. Stocking and harvesting of fish, and treatment of sea lice, will take place by larger vessels.

G. Conclusion

The proposal has given rise to considerable public objection. Concerns have been expressed by 3rd parties in terms of pollution of the water environment, impact upon habitats and species, and in view of the presence of the equipment in terms of landscape character, navigating interests and the experience of those transiting the Sound by boat. The extent of the issues raised regarding pollution and the extent of its suggested consequences for nature conservation prompted the application being held in abeyance for some considerable time, in order to afford the applicant opportunity to address these matters and for them to be assessed in detail by SEPA. Given that pollution issues are largely the remit of SEPA, and having regard to the government position that Planning Authorities should not seek to duplicate other regulatory regimes, it is inappropriate that those matters which are properly the responsibility of SEPA should be revisited as part of this application.

Of those other matters which fall within the remit of the Planning Authority none have been identified which point to the need to withhold planning consent. The proposal is, in part, a relocation of an existing site, and also an enlargement of production capacity. It enables the removal of first generation equipment and the use of more modern techniques in a site which is better flushed and which presents opportunity to hold increased biomass without breaching SEPA's environmental quality standards. It would maintain a single presence of aquaculture development at the southern end of the Sound and would enable an increase in production capacity without seriously prejudicing any of the considerations which are material to the determination of the application. In those circumstances it can be considered to be compliant with Local Plan Policy LP AQUA 1 and other relevant development plan policies, and there are no

other material considerations identified of such magnitude as to warrant other than planning permission being granted in conformity with development plan policy.

APPENDIX 11/1066/MFF: NAMES & ADDRESSES OF REPRESENTEEES

OBJECTORS:
