Childrens Water Splash Pads

Local Councils as well as the private sector are continuously in search of cost effective and innovative ways of entertaining families in an out door environment which is accessible to both active and disabled users. These Fun areas uplift and rejuvenate any area.

Splashpads are automated, interactive aquatic play areas for children of all ages, designed for usage in unsupervised play areas. They combine safety with durability, Splashpads are an effective way of introducing the excitement of aquatic recreation to urban areas.

Benefits of the Splash Pads

Low Capital Cost

For a portion of the cost of a new swimming pool, a completely automated Splashpad can be constructed.

No Lifeguard Supervision Required

The Splashpad is built on a flat playing surface allowing water to free drain eliminating the need for lifeguard supervision.

Low operational cost

Durable spray features require minimal maintenance and do not require an attendant to turn the system on or off daily.

Low water consumption

A variety of spray features designed to maximise water effects whilst minimising water consumption.

Play value

The variety of shapes, colours, water effects as well as the interactive aspect of Splashpads will provide entertainment for all ages.

Flush mounted fittings

Designed to eliminate the possibility of vandalism.

Durability

With stainless steel as the primary jet construction material, Splashpads spray features are built to last and are backed by a 10 year warranty.

Water Usage

Whilst we are aware of the cheap running costs of these units, there are further savings to be made by re-using the water collected from the Splashpad, this can be pumped to either an irrigation holding tank or used to top up a lake feature.

Splash Pad surface

Splashpad surfaces are finished in attractive, colour impact absorbing soft EPDM rubber. Intricate shapes and patterns can be created in a range of colours enhancing children's enjoyment. The soft rubber surfaces provide safe environment whilst requiring minimal maintenance.

Splashpads surfaces are finished in attractive, colourful, impact absorbing rubber. Intricate shapes, patterns and graphics can be create in a range of colours enhancing childrens enjoyment. The soft rubber surface provides a safe environment whilst requiring minimal maintenance.

We offer designs to our clients based on sensible solutions to your requirements, providing you with cost saving suggestions gained from years of experience.

We have in house Computer aided design facilities and offer 3D modelling of Spashpads to enable any design to be viewed prior to work commencing. This provides the client with the opportunity to access his build design and modify elements as required.
